INTRODUCTION TO PSYCHOLOGY

Fall 2016
Mon, Wed, & Fri 7:30 to 8:20 a.m. UGLC 346

PSYC 1301 INTRODUCTION TO PSYCHOLOGY CRN: 12118+

There are no prerequisites for this course.
Instructor: Adolfo J. Alvarez, M.A.
Office hours: Tue & Thur: 5:00 to 5:30 p.m.; Wed & Fri: 11:00 to 11:30; and by appointment+
Office: Psychology Building, Room 200 Telephone: 747-5864 E-mail: adolfoa@utep.edu

REQUIRED TEXTBOOK

LEARNING OBJECTIVES OF THE COURSE+
The overall objective of this course is to give you, the student, an overall introduction to the science of psychology. Specifically, you will learn about:
1) The major theories in psychology;
2) The basic research methods used in psychology;
3) The major findings of psychological research;
4) How psychological research findings are applied to everyday life; and
5) How to apply critical scientific thinking to everyday psychological topics.

STUDENT EVALUATION
Exams and Test Questions
There will be four tests, each consisting of 40 to 60 multiple-choice questions. Each test will be worth 100 points. The exams are not comprehensive. You will have 60 minutes to answer the tests. After each test, I will review the exam to give you immediate feedback on your test performance. I will keep the exams for two weeks+ in my office in case you want to go over your test answers.

Test questions will come from my lectures, the textbook, and films. Be prepared to answer all-of-the-above questions. You will be required to watch the film A Beautiful Mind+ (with Russell Crowe) for the final. There is a copy of the film in the Media and Microfilm office of the Library.

Test Questions from the Textbook
There will be questions that will come from the textbook on material that I will not cover during the lectures. If you don’t study the textbook, you will most likely not get an A or a B. I will not ask you to memorize dates, names of psychologists, or statistics, unless I mention them in class or the textbook states something like: “The most common psychological ….”; “The number one cause of … is ….”; or “The most important ….”

Test Questions from the Syllabus
This syllabus contains important information about the course, its purpose, and your responsibilities, so it is very important for you to read it. There will several questions about the syllabus on each test on information that has a +.
Participation in Experiments
The Department of Psychology requires Introduction-to-Psychology students to participate as research subjects in experiments conducted by its faculty and students. You will be required to participate in several experiments for a total of EIGHT experimental credits. Each experimental credit will be worth 10 points for a maximum of 80 points. Read the document titled “Research Component for Introduction to Psychology (PSY 1301)”, which is at the end of this syllabus for more information.

In case you cannot or do not want to participate in the experiments, you can write summaries of EIGHT research articles or of EIGHT chapters from any journal or book listed in the bibliography at the end of the syllabus. Each summary will be equivalent to one experimental credit and will be worth 10 points, with the exception of articles published in the journal Skeptical Inquirer. Each article you summarize from the Skeptical Inquirer magazine is worth 5 points. The summaries should be one page long and single spaced and should be turned in to me, not e-mailed. You MUST give me a hard copy of the original research or of the book chapter, if you do not, you will not earn the points. The last day to turn in the summaries is Wednesday, November 9, no exceptions.

You can combine any number of research participation with any number of written research summaries. For example, you can participate in four experiments and write four summaries; or, participate in six experiments and write two summaries. The research participation and the written research summaries must add up to eight.

Computation of Final Grade
Your final course grade will be the addition of the four exams (400 points), plus the points for participating in the experiments or the summaries of the research articles (80 points), all divided by 4.8. Mathematically, your final grade will be computed as follows:

Final grade = (Test 1 + T 2 + T 3 + T 4 + Experiments + Summaries) / 4.8).

Grading for each test and for the final grade will be based on the following percentage scale:
F = 0 – 59       D = 60 – 69       C = 70 – 79       B = 80 – 89       A = 90 - 100

The final grade will be based on the following point scale:
F = 0 – 287       D = 288 - 335       C = 336 - 383       B = 384 - 431       A = 432 - 480

ATTENDANCE
Attendance is essential to learn the course material, as I will discuss some topics that are not in the textbook. If you miss more than three classes, your final grade will be dropped one letter grade. If you know that you are going to be absent, please notify me in advance via an e-mail. If you are absent, get the notes from a student as it is not my policy to give my Powerpoint presentations.

Scantron:
You will need an 882-EScantron and a number-two pencil for the tests. The answers on the Scantron will be considered the final answers, regardless of whether you wrote a different answer on the test itself or if you changed your mind and did not erase completely.

Please go to the bathroom before the exam as you will not be permitted to leave the classroom once the exam has begun. No student will be allowed to enter the classroom once a student has finished an exam and has left the classroom.
### CALENDAR
The following schedule is tentative. I will inform you of any changes in class or through Blackboard.

***Under no circumstances (unless you are deployed by the military or you have a documented medical emergency) will the final exam be given at another day. Makeup exams will consist of open-ended questions and will be given only with documented medical emergencies or documented military deployment.

**AMERICANS WITH DISABILITIES ACT**

UTEP is dedicated to providing reasonable accommodations to students with disabilities so they have equal access and opportunity to complete their education. Students are responsible for informing the Center for Accommodations and Support Services (CASS) of their disability, and for requesting accommodations within two weeks of the start of each semester. CASS is in Room 106, Union East Building. 915-747-5148, cass@utep.edu.

**ACADEMIC DISHONESTY**

Academic dishonesty is completely unacceptable and will not be tolerated in any form. Any student involved in academic dishonesty will be referred to the Office of Student Conflict and Resolution and will be disciplined in accordance with University’s policy. Academic dishonesty includes but is not limited to cheating, plagiarism, collusion, and submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts. Cheating is defined as, but not limited to, copying answers from another student, looking in the direction of another student’s test or Scantron, talking to students during exams, looking at or using cell phones or other electronic communication devices during and after exams, and looking at any type of notes or the textbook during exams.

**BIBLIOGRAPHY**

The following bibliography contains articles and books that deal with critical thinking skills and pseudoscientific beliefs. Again, if you cannot or do not want to participate as a subject in experiments you are required to write summaries of **EIGHT** articles or book chapters listed in this bibliography.

Research Component for Introduction to Psychology (PSYC 1301)

In this course, the student will learn about numerous factors that interact to influence thinking and behavior. Just as in other scientific disciplines, knowledge in psychology is obtained by conducting carefully designed studies. Most of what the student will learn in this course, therefore, represents the findings of previous psychological studies. Although this type of information is very important, it is also important for the student to learn about the methods that are used to create scientific knowledge. Learning about scientific procedures is considered to be so vital that many scientific disciplines require students to take laboratory classes in addition to lecture classes. For example, students in chemistry courses participate in laboratory exercises in which they mix various chemicals, and observe and record the outcome of these exercises.
To facilitate learning the scientific procedures used in psychology, the Introductory Psychology course has a research requirement. The preferred method for students to fulfill this requirement is by actual participation in psychology studies. Not only will students learn about the scientific procedures that are used in psychology, but they will also be contributing to future knowledge. Studies conducted in the UTEP Psychology Department often appear in prominent scientific journals. When students are unable to or wish not to participate they have the alternative option of researching articles in psychology journals and writing a brief paper on each article. Other alternative assignments may be offered by individual instructors.

Introductory Psychology Research Requirement

Part of the student’s final grade will be based on credits earned via participation in psychological research. Students in all introductory psychology classes are required to earn 8 units of research credit. For students who choose the experiment participation option, one credit is earned for each hour of participation.

The instructor will inform students of how research credit will be factored in to compute the final semester grade, and will also provide details on alternative assignments that can be completed to fulfill the research requirement without research participation.

Students can obtain 8 credits with only 6 hours of participation or the equivalent in alternate assignments. If a student has 3 credits accumulated by the end of the 8th week of classes (by Friday, October 14), a 4th credit will be automatically added. If 7 credits are accumulated by the end of the 13th week of classes (Friday, November 18) then an 8th credit will be given.

Instructions for Participating in Psychological Studies

1. To participate in research studies, you must have a current UTEP e-mail address. If you do not already have a UTEP e-mail address, you may obtain a free e-mail account from the University. For details on getting an e-mail account or finding computer labs on campus for student use, contact the HELP desk at 747-5257 (or x4357 on campus).
2. You will need to create an account on the online psychology research participation system. To access the system, go to the following website: http://utep.sona-systems.com/ (there is a link from the Psychology Department website). To create an account the first time you access the system, use the link marked “request an account here.” Enter the information requested, including your name, your UTEP student ID number, your UTEP e-mail address, and the course in which you are enrolled.

*** I teach several Introduction to Psychology classes, so make sure that you create an account in the correct course. This Introduction class’ CRN is 12118. ***

3. Then press the button marked “Request Account.”
4. Your log-on ID and password will be sent to your UTEP e-mail account within several minutes. You may then go to http://utep.sona-systems.com/ and log in using the information that was e-mailed to you.
5. You may then select the link marked “Browse a list of studies and sign up for those that interest you.” By selecting a study, you can see more detailed information and sign up for the study if you wish.
6. Once you have signed up for a study, the system will send you an e-mail and the study will appear under “My Schedule/Credits.” You can use this feature to remind yourself of the time and location of the study. Within two days after your participation, your credit
for the study should appear online. If you do not receive credit for a study within two
days of your participation, please contact the researcher by e-mail or telephone to
resolve the problem.
7. You may participate only once in each study. Some studies may have additional
restrictions on participation that will be displayed online.
8. To ensure that your participation is recorded properly, do not set up more than one
account per person and do not use someone else’s account.
9. If you have questions about how to use this system, contact Penny Graves in the
Psychology Department at 747-5551 or pgraves@utep.edu. Please include your name,
UTEP e-mail address, and instructor’s name in your request for information.

Policy on Cancellations and Failures to Appear for Scheduled Experimental Sessions
It is important that you attend all studies for which you sign up. The Psychology
Department encourages students to exercise professionalism and courtesy in keeping or
canceling scheduled appointments. That is, if you schedule a session and later find that you are
unable to or no longer wish to attend, please cancel such participation through the Sona
system. If you cannot access the Sona system at that time, then you may cancel by sending an
e-mail to the experimenter or calling to leave a message for the experimenter. Cancellation
through the Sona system allows other students who need credit to sign up for the cancelled
session, which makes it the ideal method. Canceling by e-mail or phone lets experimenters
know that they can either open a new slot for another participant or make other plans for their
time. Remember that most experimenters are other students and are also quite busy.

Failing to show up for a scheduled experiment without appropriate cancellation
will result in a penalty of one credit being applied to your account. Each penalty credit
increases the number of experiment hours you must complete to fulfill the requirement.

The Student’s Rights as Research Participant
Participation in research is meant to be an enjoyable and educational experience.
Therefore, specific steps are taken to insure that the student’s participation will be beneficial to
both the student and society (by the knowledge gained from the study):
1. The Institutional Review Board, an ethics committee, screens each study before anyone
   is allowed to participate in order to ensure that volunteers are not in any way mistreated.
2. Before participation, the researcher will give students information about what will take
   place during the study. Students will then be asked to sign a statement of consent to
   participate.
3. After completion of the study, the researcher will debrief the participants as to the
   purpose of the study.
4. Students have the right to discontinue participation in the study at any time and without
   penalty.
5. Student participants have the right to expect the researcher to be present on time to
   conduct the study. If a participant is present on time and the researcher is not, the
   participant should first check to ensure that the date/time/location is correct. If that
   information is correct, the student should contact the researcher as soon as possible in
   order to resolve the error and receive whatever credit is appropriate.
6. Students who feel that their rights have been violated during participation in any of the
   Psychology Department’s research studies should inform their instructor. If the matter is
   not satisfactorily resolved by the instructor, they should contact the Chairperson of the
   Psychology Department Undergraduate Committee at 747-5551 and/or the Coordinator
   for Institutional Research Review at 747-8841.

Rev. 08/12
