Fundamentals of Semiconductor Devices  
EE3329, Fall 2016  
University of Texas at El Paso

Instructor: David Zubia, Ph. D.  
Office: A335  
Voice: 747-6970  
Email: dzubia@utep.edu

Office Hours: T and Th 3:00 - 4:30  
Other hours by appointment

Course Description:
This course deals with the analysis and design of electronic devices. In order to analyze and design these devices, detailed knowledge of semiconductor physics is needed. Therefore, the course will begin with treatment of semiconductor physics. The second part of the course will focus on applying knowledge of semiconductor physics to electronic devices. Devices that will be covered include diodes, field-effect transistors and bipolar junction transistors. Device physics will be used to relate internal charged-carrier behavior with external terminal characteristics of the devices.

Electronic devices are used in circuits to make complex analog and digital functions such as amplifiers (for audio, high-frequency, wireless, etc) and microprocessors. This course is fundamental to electrical engineering and will benefit persons in all areas of concentration especially solid-state devices and materials, electronics engineering, and computer engineering.

Emphasis is placed on group discussion and individual work, and lectures to clarify points. Reading and homework will be assigned. Knowledge and skill development obtained by working on assignments will be assessed through quizzes and exams. It is through reading, working on assignments and class discussions that most learning will occur. The instructor’s role will be to guide you by discussing relevant topics and assigning problems that will require you to go through the mental steps necessary to obtain knowledge and learn problem-solving skills. The instructor’s role will also be to assess your progress and give you feedback.

Learning Objectives:
After completion of this course, students should be able to:
- Students shall be able to apply fundamentals of semiconductor physics to the understanding of electronic devices
- Students shall be able to use ordinary differential equations to solve engineering problems in semiconductors
- Students shall be able to apply their understanding of the behavior of semiconductor devices in designing variations of those devices for special applications including: diodes, field-effect transistors, and bipolar junction transistors
- Students shall be able to demonstrate competence in written technical communication

Topics Covered:
- Crystal structure
- Energy bands in crystals
- Carrier transport in semiconductors
- p-n junction diodes
- bipolar junction transistors
- field-effect transistors
**Textbook:**

**Evaluation:**

<table>
<thead>
<tr>
<th></th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Problems/Exercises</td>
<td>15%</td>
</tr>
<tr>
<td>Quizzes</td>
<td>15%</td>
</tr>
<tr>
<td>Exam I</td>
<td>20%</td>
</tr>
<tr>
<td>Exam II</td>
<td>20%</td>
</tr>
<tr>
<td>Final Exam</td>
<td>30% (comprehensive)</td>
</tr>
<tr>
<td>Total</td>
<td>100%</td>
</tr>
</tbody>
</table>

**Grading and Policies:**
A: 90% - 100%  B: 80% - <90%  C: 70% - <80%  D: 60% - <70%  F: 0 - <60%

Late course work will not be accepted.
No make-up work will be given.

**Prerequisite:** PHYS 3325 (or EE 4395 Applied Quantum Mechanics for EE’s) and EE 3321 each with grade of "C" or better.

**Academic Dishonesty:**
Incidents of academic dishonesty will be referred to the Director of Electrical Engineering and the Dean of Students.
