Textbook:  
A Transition to Advanced Mathematics / Douglas Smith / 8th edition  

Course Objectives and Content:  
1.) Students will be able to understand the basic of logic and to write propositions and sentences by emphasizing the correct usage of mathematical symbols.  
2.) Students will be able to construct proofs, thoroughly understanding several important proof techniques including direct proof, proof by contraposition, proof by contradiction, proof using cases, and mathematical induction  
3.) Students will build a solid understanding of some concepts most useful for advanced courses.  
4.) Students will be able to read and understand mathematical proofs working with definitions and theorems based on the deductive reasoning.  
5.) Students will be able to write clear and concise mathematical proofs using correct logical steps from hypothesis to conclusion.  

The course will cover sections from the chapters 1 – 5 of the textbook.  

You will be responsible to access BLACKBOARD to watch the video-lectures posted each week, check the announcements/homework, review the notes posted and follow the lessons in the textbook.
Exams and Assignments:
There will be three face-to-face midterm exams (Exam 1, Exam 2 and Exam 3) and one comprehensive final exam. There will be no extra credit or curves on exams.
Regularly homework will be assigned. The homework will not be collected. The exams will include problems from homework or similar.
