

**Planetary Science
University of Texas at El Paso
Department of Geological Sciences
Spring Semester 2019**

Instructor:

Dr. Jose Miguel Hurtado, Jr.
Geology room 301A
(915) 747-5669
jhurtado@utep.edu

Class Website:

<http://www.geo.utep.edu/pub/hurtado/planetary>

Class Meetings:

Lecture/Lab: MW 10:30-11:50 am, Geology 320
Office Hours: TTh 11 am-1 pm (or by appointment), Geology 301A

Text:

There is no required text to purchase. Students will be given required readings from a variety of published books and current articles in professional journals as PDFs for download from the class website. Materials will also be drawn from selected internet sites, including the websites for current and past NASA exploration missions, the NASA Planetary Data System (PDS), and other agencies. In addition, a selection of textbooks and reference materials will be available for your use from Dr. Hurtado.

Grading:

Grades will be based on cumulative points earned from: assignments (30% total), occasional in-class quizzes, weekly paper discussions, and participation (20% total), a semester project (20% total), and the final exam (30%). Among the assignments will be a field trip related to the semester project (see schedule; details TBD).

Graduate students will be held to a higher standard than undergraduate students, and they can expect additional tasks on assignments, quizzes, paper discussions, and exams, including leading in-class discussions and/or making class presentations.

Policies:

Please contact the instructor about any concerns, schedule conflicts, missed work, etc. **in advance** or otherwise **as soon as possible!** *Valid excuses include illness, absence with the instructor's prior approval, official University business, etc., but all require documentation.* Otherwise, there are **no make-ups** for missed work, and **late work will lose 50% of its value for each day it is late!** **Attendance and participation are mandatory, and excessive absences may result in being dropped from the course!**

There will be a lot of reading for this class that everyone will be responsible for! **I will assume you to be familiar with all the material in the readings on the day we discuss it in class.** Therefore, you will be expected to keep up with all reading assignments and do the reading before the class meeting where it will be discussed. Come to class prepared with answers to the assigned questions and with your own questions. **I expect everyone to contribute to class discussions.**

Your continued enrollment in this course implies your acceptance of the policies set by the instructor!

If you are in the military with the potential of being called to military service and /or training during the course of the semester, you are encouraged to contact the instructor as soon as possible. If you think you may have a disability or if you are experiencing learning difficulties, please contact the Disabled Student Services Office (DSSO) at (915) 747-5148. They're located in Union East room 106 or you can reach them by e-mail at dss@utep.edu. The student is responsible for presenting to the instructor any DSS accommodation letters and instructions.

Reasonable collaboration is allowed on assignments (not exams). However, **I expect everyone to turn in work that is his or her own!** You **MUST** learn to trust your own reasoning and **NOT** rely on the interpretations of others, otherwise you are wasting your time. The assignments are your opportunity to learn the material. **Show all your work and be prepared to explain it!** Cheating **WILL** be noticed and **WILL NOT** be tolerated. **The University guidelines for academic dishonesty are very specific and will be strictly followed.** Please read the guidelines (see <http://studentaffairs.utep.edu/dos>), and contact the Dean of Students or the instructor if you have any concerns.

Because they are vital venues for all course business, **computer and internet use outside of class are required.** You need to have your free UTEP email account activated for this course and you need to check it regularly. If you do not have one, go to <https://newaccount.utep.edu/> to activate yours. **You will also be expected to stay continually up to date with all information posted on the course website, which will include course notes, readings, supplemental material, and assignments.** I may be experimenting with internet activities this semester so the syllabus may change as the class evolves.

Course Description:

A survey of a broad range of topics in lunar and planetary science, including the origin, evolution, and present state of the objects in our solar system. The focus of the class will be on process, as well as phenomenology, and, in particular, a quantitative understanding of important planetary processes. We will discuss the geologic properties of and contrasts among the terrestrial, rocky planets (Earth, the Moon, Venus, Mars, Mercury), the characteristics of the gas giant planets (Jupiter, Saturn, Uranus, Neptune), and the wide array of asteroids, comets, planetary moons, ring systems, and other small bodies. Planetary ages, derived from impact cratering records and other methods, and remotely-sensed data derived from robotic probes will be presented and students will gain experience with working with those data. An ongoing emphasis will be on the technology and science behind the robotic and human exploration of the solar system.

Course Outline (subject to continual change!):

<u>Week</u>	<u>Dates</u>	<u>Topics and Assignments</u>
Weeks 1, 2	Jan. 23, 28, 30	Introduction <i>Stellar evolution & nucleosynthesis; The Sun; Planet formation; Tour of the solar system; Planetary dynamics & orbital mechanics</i> Assignment 1: Differentiation; Planetary Properties; Kepler's Laws
Week 3	Feb. 4, 6	Impacts and Surface Processes <i>Impacts & impact craters; Surface processes & geomorphology on solid planetary bodies; Crater counting & geochronology</i> Assignment 2: Analog & Numerical Experiments; Crater Counting
Week 4	Feb. 11, 13	No class meetings
Week 5	Feb. 18, 20	Planetary Tectonics and Magmatism <i>Deformation, volcanoes, & geomorphology on solid planetary bodies</i> Assignment 3: Remote Sensing and Geologic Mapping of Mercury, Venus, and Mars
Week 6	Feb. 25, 27	The Moon I <i>Formation of the Moon; Geology of the Moon</i> Assignment 4: Remote Sensing and Geologic Mapping of the Moon
Week 7	Mar. 4, 6	The Moon II <i>Water in, on, and of the Moon; Lunar exploration</i> Assignment 5: NASA Lunar and Meteorite Samples (TBD)
Week 8	Mar 11, 13	Water and Habitability on Mars <i>Geology & geomorphology of Mars; Water & Habitability on Mars; Mars Exploration</i> Assignment 6: Mars from Orbit: Atmosphere and Geology Assignment 7: Mars from the Surface: Landers and Rovers
Spring Break	Mar. 18-22	No class meetings Lunar and Planetary Science Conference (LPSC) in Houston
Week 9	Mar 25, 27	Mysteries and Treasures of the Asteroids and Small Bodies <i>Meteorites, asteroids, comets, TNOs, KBO, etc.; Pluto and Charon</i> Assignment 8: Remote Sensing of 4-Vesta and 1-Ceres OR Is Asteroid Mining Feasible?
Week 10	Apr. 1, 3	The Giant Planets <i>Atmospheres, oceans, & interiors; Potential fields</i> <i>Icy Moons (Galilean Moons, Titan, etc.) & Rings</i> Assignment 9: Outer Planets, Rings, and Moons
Week 11	Apr. 8, 10	Planetary Analogs and Exploration <i>Technology and mission design for human and robotic exploration</i> Assignment 10: Planetary Analog Tool Design (Semester project and associated field trip, date TBD)
Week 12	Apr. 15, 17	
Week 13	Apr. 22, 24	No class meetings
Week 14	Apr. 29, May 1	
Week 15	May 6, 8	Final presentations

Final Examination Friday, May 17, 10:00am-12:45 pm in Geology 320

Your continued enrollment in this course implies your acceptance of the policies set by the instructor!
