Directed Studio Problems
PRNT 5350, CRN 15324, Section 001

Class Hours: 1:30-4:20 pm Monday and Wednesday, Rooms 151 and 264 FOXA

Suggested readings:

"A Printshop Handbook" by Beth Grabowski.
“Eye on Europe: Prints, Books & Multiples/1960 to Now”.
“Prints of the 20th Century”, by Riva Castleman.
“Papermaking: How to Make Handmade Paper for Printmaking, Drawing, Painting, Relief and Cast Forms, Book Arts, and Mixed Media” by Jules Heller.

Instructor: Kim Bauer
E-mail: kbauer@utep.edu
Office: 151A Fox Fine Art Center
Office Hours: Monday and Wednesday 11:20 am – 12:15 pm and by appointment
Office Phone: 915-747-7846
Mailing Address: Department of Art, Fox Fine Arts, UTEP, El Paso, Texas 79968
Instructor Introduction

Kim Bauer is your instructor for this course. He holds a BFA degree from Michigan State University and an MFA from Eastern Michigan University. He has worked as a Gallery Director for the Michigan Guild of Artists and Artisans as well as the Ann Arbor Art Association and has taught courses in printmaking and drawing at Henry Ford Community College and Eastern Michigan University before accepting a position here at UTEP in 1988 where he continues to teach courses in printmaking.

Course Description

Directed Studio Problems in Printmaking: Independent creative research in printmaking with regular consultation between student and assigned faculty member. This course requires a minimum of twelve hours in studio per week with significant time for additional research, preparation, and printing. Strong concepts along with a personal exploration of images are necessary components to good prints. Library research and sketchbooks for both technical and conceptual development are required.

Course Prerequisite Information

Prerequisite: permission of instructor.

Course Goals and Objectives

The goal of this course is to build upon a student's printmaking experiences, production, and concepts at a graduate level.

Course Outcomes

Successful students will produce a body of work that challenges them in quality of concept, production, and technique.

Course Requirements

Students are expected to write an initial statement of intent, and consistently work toward a successful portfolio of printed images. A final portfolio of work completed during the semester must be presented the final week of class.

Evaluation: Grades are based on your overall steady performance during the semester, including: quality and quantity of work, commitment to developing and expanding your concepts and studio work through technical and idea exploration.
Course Policies

As a graduate student you are expected to set a stiff pace of work and production combined with intent on quality and the ability to defend that quality in verbal discussion. I would encourage experimentation over stagnation but never at the long-term loss of quality or direction. Grades are based on your overall steady performance during the semester, including: quality and quantity of work, commitment to developing and expanding your concepts and studio work through technical and idea exploration.

You are strongly encouraged to be working around other students as your ideas and skills are a valuable (extremely valuable) asset to the undergraduate students. Please take advantage of my office hours and if necessary make appointments to see me outside of class.

**I expect to see new works and ideas from you each week.** You and I will set aside a time to individually discuss your work and evaluate your progress a minimum of five times during the semester. Times will be determined.

Your work should demonstrate growth, curiosity and an ambitious work ethic. Obviously some works will be in-progress or continuations of previous ideas but finished work is expected on a regular basis.

I am more than willing to assist you in any way possible, however, I do expect that as a graduate student you will do the necessary preliminary research and experimenting to find solutions and sources. If you are unfamiliar with some of the printmaking processes or techniques, you are always welcome to attend the Print I, 2&3 or Advanced Print demos. See the print instructors for scheduled times.

A final portfolio (actual, not digital) consisting of the prints you realized this term will be due December 3 at 1:00pm. Late portfolios will not be accepted. If you wish for an in-progress grade before that time please submit work one week in advance.
Materials and Personal Equipment

GENERAL  (everybody needs these)

- sketchbook for notes and drawings
- x-acto knife or utility knife
- pencil, pen, and sharpie marker
- brushes
- hand cleaner
- sponge
- disposable rubber gloves and/or sturdy rubber gloves
- orange base cleaner for oil base ink clean-up
- quart denatured alcohol
- 18" x 24" newsprint pad
- 1 - 3 1/2" or 4 " soft rubber brayer (other sizes may be helpful)
- 1 - 3 1 1/2" putty knives (ink knives)
- razor blade scraper to clean oil-based ink slabs
- masking tape
- Scotch packaging tape (clear or brown, 2” wide)
- scissors
- printing papers (BFK, Arches, Stonehenge, Mulberry, Hosho, Rives, Copperplate, German Etching, Murillo,... whatever your needs may be.. see me if you are unsure)

INTAGLIO

- sheet copper .043 thick. Copper may be purchased from Aarmour Metals, 9925 Carnegie 594-8263. Not open on weekends.
- Scraper, burnisher and drypoint needle.
- black enamel spray paint (Home Depot, Lowes)
- Graphic Chemical #514 black etching ink (bookstore or Art Center) or
- Artist's Preferred Black Etching ink from Daniel Smith Inc. 1-800-426-6740 or
- Akua water based Intaglio Ink Carbon or Lamp Black and Akua Oil Converter
- etching red, yellow, blue and white (will also work for relief and monotypes)
- sheet mylar 18" x 24" .005 thickness
- quart denatured alcohol for rosin aquatints
- quart turpentine or paint thinner
- quart lacquer thinner; necessary sometimes for spray enamel aquatints
- 14”x17” 1/8 plexi or acrylic sheeting for registration guide on press; is most helpful for multi-color images
LITHOGRAPHY

- 25 1/2" x 36" (or larger size) aluminum lithographic plates (order on-line) don't bend or get fingerprints on dull side. You can order these and other sizes thru Takach Press in Albuquerque or Graphic Chemical and Ink Company.
- Korn's lithographic pencils, crayons, rubbing ink and stick tusche
- several yards of cheesecloth
- clear packaging tape (2” wide)
- sheet mylar for color registration
- registration pins (XPEDX)
- quart of naphtha for washing out plates or stones
- quart of lacquer thinner if using Xerox transfers
- quality sponges (O-Cell-O work well)
- wax paper for storing mixed inks

WATERLESS LITHOGRAPHY

- 25 1/2" x 36" (or larger size) aluminum lithographic plates (order on-line) don't bend or get fingerprints on dull side. You can order these and other sizes thru Takach Press in Albuquerque or Graphic Chemical and Ink Company.
- GE II clear, white or grey silicone
- Stadler Mars Omnicrom 108-9 black water based pencil for waterless litho drawing
- Van Son rubber base inks, transparent base and Setswell
- small rubber brayer 3- 4 inch
- quart of acetone
- Bounty paper towels
- mineral spirits
- registration pins for multiple color images
- sheet mylar for color registration

PAPER PLATE LITHOS

- 2-3 sponges
- brayers
- 2” brush for shellac
- shellac
- denatured alcohol to clean shellac brush
- 14 x 17” 1/8 plexi or acrylic sheeting for mixing inks and brayer area
- ink knives
- Xeroxes
MONOTYPES

- 1/8" Plexiglas or Lexan (Home Depot, Lowes)
- oil or water based inks
- .005 sheet mylar for color registration
- assorted brayers and brushes

RELIEF

You can print relief from any flat, stable and unbreakable surface. Below are some traditional standards.

- 1/4”, 1/2”, 3/4” birch plywood
- 1/8” thick Komatex from Baker Plastics or Regal Plastics on Pellicano
- linoleum mounted or unmounted
- oil or water based relief printing inks
- small soft brayers 3 1/2” to 4” are most common but 1” and 6” are also handy
- hand carving tools, electric carving tools, wood burners, router, chainsaw, etc.
- printing papers and mylar for registration if necessary

PAPERMAKING

- mould and deckle
- paper pulp or cotton linters
- methyl cellulose (powdered) sizing
- newsprint
- brayer
- sponge/s
- plastic cup bucket or bowl/s
- blender or power paint mixer and 5 gallon bucket for pulp
- sink or large plastic tray to hold pulp
- couching cloths: wool felt is ideal but interfacing or Pelon (not the iron on type), flannel, canvas, cotton towels, paper towels and newsprint will work
- apron
- hydraulic press, iron, boards for pressing
PHOTOGRAPHY

- CAMERA: 35mm camera with or without manual adjustment or use a pinhole camera
- FILM: 2 rolls - 24 exposure - 35mm black and white film such as: Plus-x pan 125 or Tri x 400, 200 or 100 speed film (must have D-76 processing)
- PAPER: 20-50 sheets 8" x 10" black and white RC Variable Contrast Photographic print paper or other suitable papers for advanced photographers.
- CHEMICAL CONTAINERS: 4 - 20 oz. clear plastic bottles (water bottles - remove original label!) Label each clearly as: D-76 Film Developer, Film Stop Bath, Film Fix, Photoflow for Film. All are poisonous!

Freestyle Photo 1-800-292-6137 www.freestylephoto.com or check out B&H Photo in NYC.

SERIGRAPHY

- Screen 23” x 31” 230 nylon yellow mesh screen - make sure we have a squeegee for your size. Screens may be ordered through Reece Supply Co. of El Paso, www.reecesupply.com, 1530 Goodyear Dr # J, El Paso, TX 79936, (915) 592-9600 or SilkScreeningSupplies.com or ScreenPrintesSupply.com
- Scotch packaging tape is a MUST!!! 2” wide clear or brown
- Ink: I will supply black, which is mixed with an extender base. Colors and extender base are available as Speedball Acrylic Screen Ink (Art Center or Graphic Chemical 800-465-7382 or Dick Blick 800-828-4548 or Diesel Fuel Prints 503 231 8988)
- Speedball Photo Emulsion (quart) and Sensitizer (8 ounce) for photo screen (Art Center or Graphic Chemical 1-800-465-7382)
- 2 - 3 sheets 20" x 30” or 30" x 40”.005 sheet mylar for color registration
- 1 gallon of household bleach mixed with 1 part water to preserve screen
- plastic spatulas for mixing ink and removal from screen
- plastic cups for mixing inks
- plastic bowls with lids for storage of extra mixed ink
- set of two registration pins for aligning multiple color prints

COMPUTER

- computers with Photoshop CS and Illustrator CS are available in LACIT on the fourth floor of Liberal Arts Building. Some additional computers are available in the for your use in room 152 but they do not have the support staff so check to see if you can download images successfully before creating a file on image or text file.
- a 512mb or larger USB storage drive is helpful to transfer and save files
- sometimes large or multiple files require that you burn a CD-ROM so a blank CD is advisable with a storage case
- a digital camera along with a USB connection and/or scanner to import images
FOR LOAN

**Lithography stones** are available in various sizes. Pick a size and weight you can handle.

If you borrow tools you are required to return them in good condition or buy replacements. Check with Manny in the woodshop should you need to borrow a hammer, router, etc.

*Other materials may be needed.*

*The Art Department cannot supply individual consumable materials.*
Graduate Student Printmaking Lab Hours

The printmaking labs will be accessible to enrolled graduate students currently accepted into the MA Studio as a Printmaking Major or Printmaking Minor taking classes necessary to fulfill their degree. All other graduate students taking a printmaking class will have limited access only during class or lab hours.

Lab and class hours are often crowded so please be responsible with your space needs and store unnecessary tools, paper, backpacks, etc, under the tables or in your drawer to maximize work space.

Please keep the doors closed and locked to the printmaking labs when you are using them outside of posted lab hours.

Please clean up after yourself. Lock the lab and turn off all hotplates, computers, power sprayers, and make sure all doors and sliding glass doors are locked upon leaving.

Do not allow students without keys access to the studios for any reason outside of posted lab or class hours.

Students found incapable of following these guidelines will lose their lab privileges.
In case of an emergency call the Campus Police at 747-5611 or dial 911

Due to the nature of the processes involved in this course you will come in contact with several potentially harmful substances and equipment. Before working in the print studios you should be familiar with the possible hazards and take precautionary measures to avoid injury. Avoid eating or drinking when in either of the print rooms as this makes it easier for you to ingest unhealthy materials.

If any equipment appears to be broken or functioning improperly do not use it and report it to the instructor as soon as possible. Put a sign on the damaged equipment warning others.

Do not use equipment you have not been trained to use properly.

**Be proactive regarding your health.**

- **Wear Protective Gloves:** when using any powder, liquid, solvent or ink other than pure water.

- **Wear Protective Eyewear:** when dealing with any chemical liquids, solvents or acids that may splash into your eyes.

- **Wear A Dust Mask:** when working with dusts, powders or when sanding metals.

- **Wear a Respirator:** when working with acids
FOOD or DRINK - chemicals are always present in the air or on the work surfaces in these rooms. It is unsafe to consume any type of food or drink in the printmaking rooms.

VISITORS - This is not a healthy or safe environment in which to have small children or visitors. Please do not leave them unattended during their brief visit to the printmaking rooms.

Below is a partial list of harmful materials and equipment specific to the printmaking processes. Please be alert and above all use common sense with all materials and equipment.

ACIDS - Acid baths for etching are mixed with acid and water. Avoid getting acids on your skin or clothing - wear protective goggles and gloves. Should acid get in the eyes use the water safety eye rinse in the acid room and seek medical attention. The safety shower should be used if you get acid spilled on your body and again seek medical attention. Avoid breathing the acid vapors and make sure the two ventilation fans are running when entering the acid room. The acid baths are labeled according to the type of metal to be etched in them. Dutch Mordant (hydrochloric acid and potassium chlorate crystals) is for etching copper. Nitric acid is for etching zinc. Never mix or attempt to refill or transfer these acids yourself, always ask the instructor or the studio assistant. Acids should always remain covered except for lowering and removing your etching plate. The windows, which lower in front of the vats, should be kept closed to better assist the ventilation system in removing harmful fumes. Avoid breathing the vapors of any acid or fumes produced from etching.

In lithography, full strength nitric and phosphoric acids are used to etch stones and aluminum plates. These acids are kept in glass bottles secured within a wooden box and should not be moved. Always wear protective goggles and gloves when handling these
acids. Acid should be removed from these bottles only with an eyedropper and any excess acid should be placed back into the appropriate bottle. TAPEM is also used in lithography as an aluminum plate etch and contains small amounts of phosphoric and tannic acids. Any full strength acid that comes in contact with your body or clothing should be flushed immediately and repeatedly with water and seek medical attention.

**ELECTRIC HOT PLATES** - The hot plates in the etching room should be used only for the heating of etching plates. The temperature on the electric hot plate should never exceed 225 degrees. Flammable materials and solvents should not be used near the hot plates and paper that is placed on these hot plates must be removed promptly to prevent fire. Hot plates should be turned off after use.

**PRESSES** - All presses; etching, lithography, letterpress, bookbinding, are dangerous and should only be used if you have been instructed how to properly operate the equipment. Long hair or loose clothing should be tied back to avoid being caught in the rollers or gears. Hands should be kept clear of the presses and their beds while moving, the only hand needed on the press is the one to turn the crank. Excessive pressure on any of the presses is unnecessary and will cause them to crank hard and create a dangerous situation. Maximum pressure will not make a better print!!!! The etching presses have calibrated sets on either side and should be adjusted to the type of printing matrix and felts you are using. Never force a plate or stone through the presses, if the tension feels too tight reverse the crank and readjust the tension. A material or object other than those the press has been designed for should never be passed through the press.

**ROSA** - Powdered rosin is used in etching and lithography. The dust from this rosin can be harmful to the lungs. When using powdered rosin do so in a well ventilated area and use a respirator if necessary.

**TALC** - Powdered talc is used in lithography and needs the same precautions as rosin.

**SOLVENTS** - Kerosene, lacquer thinner, lithotine, naphtha, denatured alcohol, turpentine, etc. should all be used with moderation and with rubber gloves and the appropriate ventilation. Use these chemical solvents only in the vented hood area in room 151B to prevent fumes from entering the common work area. To clean inks or plates in the other rooms the use of vegetable oil and or an orange-based spray cleaner is highly recommended. Keep solvents away from hot plates and avoid breathing vapors. To minimize the use of solvents it is strongly advised that all students clean oil based ink slabs initially with a razor blade or scraper to remove all excess ink. Then only a small amount of solvent or orange cleaner will be necessary to remove the remaining ink film.

**LITHOGRAPHY STONES** - The lithography stones are extremely heavy. Please only carry what you can lift and transport comfortably. Never carry a wet litho stone or attempt to move a stone with wet hands. The blue hydraulic transport table is available in room 264 to assist you in transporting these stones.
PIGMENTS & INKS - Lithography, screen, relief and etching inks along with the powdered pigments to make etching ink should be kept off the skin as much as possible. Avoid breathing the dust of the powdered pigment. When mixing your own ink or using any powdered pigment a respirator is recommended. Avoid excessively breathing the vapors of any oil based ink or ink modifier.

PHOTOGRAPHIC EMULSIONS & CHEMICALS - All photographic sensitive screen printing emulsions contain dichromates, which are dangerous and should only be used with protective gloves. All traditional photography chemicals, including developer, stop bath, fix, toner and bleach should not be allowed to come in contact with the skin and should only be used in the approved areas and with the necessary precautions. Large vats of photographic chemicals pose vapor risks and should only be use with adequate ventilation. Avoid excessively breathing the vapors of any photographic chemical.

In case of an emergency call the Campus Police at 747-5611 or dial 911
## University Policies

### PLAGIARISM/ACADEMIC DISHONESTY STATEMENT

**Cheating/Plagiarism:** Cheating is unethical and not acceptable. Plagiarism is using information or original wording in a paper without giving credit to the source of that information or wording: it is also not acceptable. Do not submit work under your name that you did not do yourself. You may not submit work for this class that you did for another class. If you are found to be cheating or plagiarizing, you will be subject to disciplinary action, per UTEP catalog policy. Refer to [http://www.utep.edu/dos/acadintg.htm](http://www.utep.edu/dos/acadintg.htm) for further information.

### DISABILITIES STATEMENT

**Disabilities:** I will make any reasonable accommodations for students with limitations due to disabilities, including learning disabilities. Please see me personally before or after class in the first two weeks or make an appointment, to discuss any special needs you might have. If you have a documented disability and require specific accommodations, you will need to contact the Disabled Student Services Office in the East Union Bldg., Room 106 within the first two weeks of classes. The Disabled Student Services Office can also be reached in the following ways:

- **Web:** [http://www.utep.edu/dsso](http://www.utep.edu/dsso)
- **Phone:** (915) 747-5148 voice or TTY
- **Fax:** (915) 747-8712
- **E-Mail:** dss@utep.edu
