Course Description: A study of cost, demand, and price theory; the concepts, assumptions, and policy implications of aspects of particular equilibrium and general equilibrium theory; a critical survey of various concepts of the scope, methods, and approaches to economics.

Grades: The class grade will be determined by the following four components:

Four Exams (60%)
Four Problem Sets (20%)
Review Presentations (10%)
In-Class Participation (10%)

Exams: There will be a total of five exams. The first three will be based on the first three units and titled in the course outline below, and the final exam will be a cumulative exam. You will be allowed to drop your lowest exam.

Exam I	Wednesday, September 14
Exam II	Monday, October 10
Exam III	Monday, October 31
Exam IV	Monday, November 28
Final Exam	Wednesday, December 7, 4:00-6:45 PM

Student Review:

I find that students often learn better when they are able to verbally explain a concept for others. For this reason, after Exam IV, we will begin reviewing for the final. However, I will not be providing the review. You, the students, will provide a five to ten minute review of one of the concepts provided below. You may work in groups of two or even three provided that all other groups have at least two members. After forming groups, topics will be randomly assigned.

Problem Sets: There will be a problem set associated with each of the four units. These will be due on the dates shown below:

[Texas Senate Bill 212](#) requires me to report anything suspicious. It is not up to me to determine whether or not the activity is consensual or not. My failure to report would likely lead to my termination. Please be considerate and try and avoid comments that could be misconstrued as offensive or threatening.*
