

EE3353: DISCRETE-TIME SIGNALS AND SYSTEMS

SYLLABUS: FALL 2021, (CRN: 11272) (Draft Ver. 3.0, updated 8/24/2021)

INSTRUCTOR: Sergio D. Cabrera, Associate Professor, Co-Instructor
Dept. of Electrical and Computer Eng.
Engineering Annex Bldg. Room A306, UTEP campus
Tel. Direct (915)747-6968; ECE Dept. (915)747-5470; Fax (915)747-7871
E-mail: sergioc@utep.edu (best way to communicate)

OFFICE HRS.: Monday, Wednesday in my Office Eng. Annex A306: 12:00 PM – 12:45 PM
Tuesday, Thursday **online in EE3353 Blackboard course room** 11:30 AM – 12:30PM
Friday in my Office Eng. Annex A306 11:00 AM – 12:00PM
(send e-mail to confirm Friday availability)

CLASS TIME/PLACE: **Monday and Wednesday, 10:30 AM – 11:50 AM (CRN: 11272)**
Business Building 321, UTEP Campus (in person)

TEXTBOOK: *DSP First, Second Edition* by James H. McClellan, Ronald Schafer, and Mark Yoder, Pearson, 2016 (use of earlier editions is NOT recommended, there are too many differences).

This is the companion Web site: <https://dspfirst.gatech.edu/>

The textbook is available through the UTEP Bookstore. To buy the e-book directly from the publisher visit:

<https://www.pearson.com/us/higher-education/program/Mc-Clellan-DSP-First-2nd-Edition/PGM86857.html>

PREREQUISITE: EE2350 Electric Circuits 1 and CS1320 both with a minimum grade of “C”.

CATALOG DESCRIPTION: Representation and analysis of discrete time signals and systems, digital filtering, sampling, spectrum analysis, Z-transform, DT Fourier transform, and the DFT. Emphasizes computer simulations and some basic applications to communications, control and signal processing.

PREREQUISITE BY TOPIC: calculus and differential equations; complex numbers and functions; basic time-domain and steady-state circuit analysis; basic familiarity with MATLAB software tools.

COURSE DELIVERY, RECENT MODIFICATIONS, AND OVERVIEW: The class is starting 100% in-person with support and enhancements using Blackboard (BB) (recorded videos, document handouts, turning in take-home assignment, if any, etc.). Classes were recorded in the past and could be made available on BB for those that want additional presentations/lectures, examples, and demos, upon request. Quizzes and exams will begin as in-person, face-to-face or take-home assignments. The companion Web site of the textbook is very extensive, make sure to access it as soon as possible. We will be continuing with the new scheme where EE2353 is NOT a pre-requisite for this course. Thus, it covers the material at a lower level than past EE3353 courses.

The modified approach will follow the new textbook with an accelerated pace on the first few chapters covering sinusoids and spectra of signals. First there is review of basic topics related to real and complex exponentials (AKA complex sinusoids) and sums and other basic combinations of sinusoids. The phasor concept is re-visited from Circuits to relate real and complex sinusoids. For sums of sinusoids, a graphical complex spectrum representation is presented and illustrated. Basic time-domain signal transformations and their effect on the spectrum are discussed. A brief introduction to Fourier Series is presented as a special case of sums of sinusoids but it is not covered in depth, that is done in EE2353, see Appendix C.

Next we make the transition to discrete-time signals by considering sampled sinusoidal signals. The basic linear system concepts are then introduced with running average systems and other simple finite-impulse-response (FIR) digital filters. Impulse sequences are presented leading also to the impulse response characterization of a filter. Convolution is treated as a numerical operation using discrete-time signals and systems. The key concept of frequency response is derived and interpreted for FIR filters emphasizing the magnitude and phase changes experienced by sums of sinusoid when filtered

by a linear time-invariant system. Next, the concept of discrete-time Fourier transform (DTFT) arises naturally including the inverse DTFT allowing us to define ideal filters. We then move to the discrete Fourier transform (DFT) deriving it as a sampled version of the DTFT and computable through popular fast algorithms that are not discussed in detail. The ideas of DTFT and DFT allows for an understanding of practical spectrum analysis to successfully employ the powerful spectrum analysis tools readily available in software environments such as MATLAB.

Finally, the z-transform is introduced in Chapter 9 and (Infinite Impulse Response) IIR systems in Chapter 10. At this stage, a student will be rewarded with the ability to understand applications involving the sampling theorem, discrete-time filtering, and spectrum analysis. Furthermore, they will be prepared to move on to courses in linear analog circuits, continuous-time signals and systems. In general, this course will also help prepare students for Senior (and graduate) level courses in Controls, Communications and Signal and Image Processing.

COURSE GRADING (subject to change if in-person instruction is changed to partially or fully online)

• In-class Semester Exams (2 in-class exams, with self-prepared notes)	45% (*or 30%)
• Homeworks, Matlab Projects, Lab. Assignments	15% (*same 15%)
• Quizzes	15% (*same 15%)
• Comprehensive in-person Final Exam (with notes allowed), during Final Exams week	25% (*or 40%)
TOTAL	100%

*** Alternative weighting used only if it gives you a higher grade (this sometimes helps a few students improve one grade level if they are on the borderline between two grades)**

KEY DATES:

Exam 1 date:	September 29, 2021
Exam 2 date:	TBD
Final Exam actual date:	Friday Dec. 10, during 10:00-12:45 PM

USE OF E-MAIL: Each student is required to read their officially registered UTEP e-mail account often enough to monitor ongoing information related to this course including Blackboard announcements. For the most part, blackboard uploading of instructor produced documents replaces the use of direct e-mail delivery.

USE OF BLACKBOARD: UTEP rules and guidelines will be used if it is necessary to switch to online or Hybrid delivery. Every effort will be made to keep the face-to-face, in person exams, whenever possible.

COMPUTER USAGE: The MATLAB software package (with many Toolkits and Toolboxes) is made available via download or a DVD or direct install on your laptop to all Engineering Students from the Engineering Technology Center (ETC). <http://etc.utep.edu/> Tel. (915)747-5223, E-mail: etchelpdesk@utep.edu

With luck, there will be an option to simply download Matlab that does not need the VPN from www.utep.edu/matlab.which (it is big, about 6 Gbytes). More on this as we get the official policy from ETC.

IMPORTANT POLICY:

- Homeworks will be graded pass-fail to *reduce incentive to copy*, some problems will be solved in class, solutions or brief answers will be provided, this is where most of the learning takes place.
- Quizzes will be based on the homework problems expecting that each student has already attempted the homework and has reviewed the solutions (made available ahead of time or discussed during class time). The approach will allow you to use your own homework paper as a reference (in your own handwriting). To keep students from showing up unprepared, limited time will be allowed to solve quizzes during the class time period.
- *To strongly discourage sharing your work with others for quizzes and exams*, uniqueness of the solution process will be evaluated and similar looking wrong answers will be evidence to provide to the Academic Dishonesty authorities. Groups of students that share their work will be grouped together for easier follow-up documentation and accusation.
- Exams rules will be determined for each exam the week prior to its offering subject to any official adjustment in delivery method. The preferred approach will always be *face-to-face proctored exams* with no access to computers, smartphones, electronic documents, etc. These exams are to be solved by hand with the use of your self-prepared, handwritten notes and paper copies of key textbook Tables provided by instructor.

TOPICS TO BE COVERED (the exact order, pages and/or sections and subsections will be listed in homework handouts and/or will be sent via e-mail).

I- Sinusoids, Spectrum Representation, Sampling and Aliasing (focus on sums of sinusoids, Chapters 2-4, Appendix C)

II- Finite Impulse Response (FIR) Filters and their Frequency Response (Chapter 5-6).

III- Discrete-Time Fourier Transform (DTFT) and Discrete Fourier Transform (DFT) (Chapters 7-8)

IV- Z-Transform (Chapter 9)

V- Infinite Impulse Response (IIR) Filters (Chapter 10)

EFFORT, PARTICIPATION and ETIQUETTE:

- Students (domestic or international, no exceptions) that are clearly not doing the homeworks, are failing quizzes, and who fail Exam 1 will be dropped from the course unless there are extenuating circumstances or Visa complications (let's discuss it).
- Come to class and show up on time. Habitual late comers may not be allowed in class without a justification.
- Leaving early is considered disruptive and unprofessional, it should be kept to a minimum. Inform the instructor ahead of time if you must leave early and sit near the door to minimize disruptions.
- Ask questions of broad interest, your fellow students will also benefit.
- Bring your book to class if possible.
- Turn down the sound on cell phones, beepers, i-pods, etc. during the class period.
- The use of cellular phones during exams and quizzes is strictly prohibited, put them away and out of reach.
- Do not bring *smelly food* into the classroom unless you are willing to share with me and everyone else that will suddenly become hungry! Eating other things during class should be done very quietly and as a last resort.
- **Fairness statement** (version 5): the key fairness criterion for this course is equal opportunity for all students to receive feedback, help, information, scores, handouts, etc., individual requests cannot be accommodated. Variability in the difficulty of quizzes and exams is adjusted by curving the scores before entering into the final semester score formula. Typically, this means obtaining a score on a scale of 100% by dividing the raw score by a constant S = approximately the 3rd highest score in the class on that Exam or for the total score for all quizzes. Grades are not negotiable individually but fair adjustments can be made for the whole class.

ACADEMIC INTEGRITY: Please review the statements below and UTEP's Web page on Policy on Academic Integrity at: <https://www.utep.edu/student-affairs/osccr/student-conduct/academic-integrity.html>

Academic dishonesty is prohibited and is considered a violation of the UTEP Handbook of Operating Procedures. It includes, but is not limited to, cheating, plagiarism, and collusion. Cheating may involve copying from or providing information to another student, possessing unauthorized materials during a test, or falsifying research data on laboratory reports. Plagiarism occurs when someone intentionally or knowingly represents the words or ideas of another person's as ones' own. And, collusion involves collaborating with another person to commit any academically dishonest act. Any act of academic dishonesty attempted by a UTEP student is unacceptable and will not be tolerated. Violations will be taken seriously and will be referred to the Dean of Students Office for possible disciplinary action. Students may be suspended or expelled from UTEP for such actions.

Academic dishonesty is an assault upon the basic integrity and meaning of a University. Cheating, plagiarism, and collusion in dishonest activities are serious acts which erode the University's educational and research roles and cheapen the learning experience not only for the perpetrators, but also for the entire community. It is expected that UTEP students will understand and subscribe to the ideal of academic integrity and that they will be willing to bear individual responsibility for their work. Materials (written or otherwise) submitted to fulfill academic requirements must represent a student's own efforts. Any act of academic dishonesty attempted by a UTEP student is unacceptable and will not be tolerated. Violations will be referred to the Dean of Students Office for possible disciplinary action. Students may be suspended or expelled from UTEP for such actions.

COVID-19 PRECAUTIONS: Please stay home if you have been diagnosed with COVID-19 or are experiencing COVID-19 symptoms. If you are feeling unwell, please let me know as soon as possible, so that we can work on appropriate accommodations. If you have tested positive for COVID-19, you are encouraged to report your results to covidaction@utep.edu, so that the Dean of Students Office can provide you with support and help with communication with your professors. The Student Health Center is equipped to provide COVID 19 testing.

The Center for Disease Control and Prevention recommends that people in areas of substantial or high COVID-19 transmission wear face masks when indoors in groups of people. The best way that Miners can take care of Miners is to get the vaccine. If you still need the vaccine, it is widely available in the El Paso area, and will be available at no charge on campus during the first week of classes. For more information about the current rates, testing, and vaccinations, please visit epstrong.org
