

CS 1301 - Intro to Computer Science

Fall 2018

Course Syllabus

Course Objectives: Students will learn to be active learners, understand the motivations for computing, basic concepts of algorithms, basic computer organization, and impacts of computing. They will develop problem-solving skills, implement solutions to computing problems in a high-level programming language, and build team skills, critical-thinking skills, and professionalism.

Prerequisite: MATH 1508 or MATH 1411 with a grade of C or better.

Knowledge and Abilities Required Before Entering the Course: Students entering the course are not required to have a background in Computer Science or programming. They should be familiar with topics from Pre-calculus, including algebraic functions, proofs, and base representations of numbers.

Topics covered this semester: The semester will be structured in four phases.

- During the first phase (first 4 weeks), we will cover algorithms, abstraction, memory and variables, including arrays. We will also go over conditionals and repetitions as they appear in our daily lives.
- In the second phase (next 3 weeks), we will introduce how conditionals and repetitions as loops can be used in algorithm design and in java, blending this with methods.
- During phase 3 (next 4.5 weeks), we will introduce recursion and will practice integrating the essential components presented in phases 1 and 2 with recursion.
- Finally, in our last phase, we will learn about user-data types and introduce the use of linked lists.

Logistics

Lecture sessions: Tues & Thurs 1:30pm - 2:50pm in CCSB 1.0704

Instructor: Schuyler Manchester, [Googler](#) in Residence - schuylerm@google.com - office: CCSB 3.1016

Instructor office hours: Tues 10:00am - 11:30am, Thurs 3:00pm - 4:30pm, by appointment, and open door policy

Teaching Assistant (TA): Adeel Malik - amalik@miners.utep.edu

TA office hours: Mon & Wed 1:00pm - 3:00pm

Note: You should be enrolled in one lab section. Do not drop in on a lab or lecture section other than yours without prior approval from your instructor.

Textbook: Programming in Java, by Zybooks, available at zybooks.zyante.com. To subscribe to your textbook, please enter the following code:

UTEPCS1301Fall2018

Grading

Grades are communicated to students in a timely manner. It is the student's responsibility to keep track of their grades by compiling the grades they receive. Your semester grade will be based on a combination of homework assignments, weekly quizzes, class participation, 3 midterm exams, student engagement, and a final exam.

Component	Points
Homework Readings / Participation Activities	100
Participation	30
Student engagement in computer science	20
Quizzes (4)	200
Midterms (3)	450
Final Exam	200

Grade	% (Percentage)	Points
A	90-100	900-1000
B	80-89	800-899
C	70-79	700-799
D	60-69	600-699
F	59+ <	Below 599
N/A or None		0

Expectations

Class Participation

Attendance at and participation in all lecture sessions are critical factors of your success in this course.

Students should be on time for all scheduled sessions and attend the entire session. Attendance will be taken at every session (at first you will have to sign in but as time goes the instructor will know you and mark you present without your help) and will count towards your class participation grade.

Students should notify the instructor prior to missing a session if at all possible, and certainly right after if earlier was not possible. The instructor will allow two unexcused absences per semester before having the option to deduct points from the final grade (5 points per subsequent unexcused absence).

It is the student's responsibility to obtain the content covered during missed class(es). Participation points also include completing post-lecture and post-labs online quizzes (when requested) that are administered as surveys to monitor students' overall progress and potential struggles.

Quizzes

The purpose of each quiz is to ensure that you are staying current with the weekly reading assignments and video lectures and to verify that you have acquired the skills developed in class. Quizzes are unannounced. They usually will usually be on-line quizzes on socrative.com. There will be no make-ups for missed quizzes.

As part of the quiz grade, the students will have to turn in their paper notebooks when asked so that the instructor can assess their notes (clarity, readability, usability, correctness, and completeness). The grade assigned for notebooks will count as 30% of the quiz grade. Note: special accommodations will be considered if a student cannot take notes because of a medical condition.

Finally, there will be unannounced in-class assignments, to be turned in either by the end of the class or within a short period of time after the class (details will be given for each assignment). There will be no make-up for missed in-class assignments. Grades of such assignments will weigh equally with grades from online quizzes.

Homework

Reading and homework assignments will be announced in class and/or posted on piazza (under the Homework section of Resources). If you miss a lecture session, it is your responsibility to find out what you missed. You should expect to spend at least four hours per week outside of lecture on reading and homework. Most of your homework will be work assigned on your online zybook: completing the assigned activities on time will be crucial to your success in the class (since these activities prepare you for classwork) and getting a good grade (since late completion will be penalized).

Exams

There will be 3 midterm exams and one final exam. All four exams together will weigh 65% of your overall final grade for CS1301. Because the exams contribute so heavily to your total grade, it is vital that you do well on them. If you have test-taking difficulties in general, or if you have difficulties with our tests in particular, please come let me know as soon as possible and/or request appropriate accommodation from UTEP's Center for Accommodation and Students' Services.

The purpose of the midterm exams is to allow you to demonstrate mastery of course concepts covered thus far during the semester. Mid-term exams will take place during the regular lecture session and are tentatively scheduled to be held around week 6-7, week 10, and week 14. Make-up exams will be given only in extremely unusual circumstances. If you must miss an exam, please meet with an instructor, BEFORE the exam.

The final exam will be comprehensive. You must score 65% or better on the final exam to pass this course. You must take the final exam during the time shown in the schedule for the lecture section that you normally attend. Do not "drop in" to another section: there will not be a copy of the exam for you. This is University policy. If you have a scheduling conflict (e.g., if you are taking a final at EPCC) or if you are scheduled for three final exams in one day, see your instructor in advance for accommodation. The final exam schedule is available online. It is the students' responsibility to keep informed.

Student Engagement in Computer Science

During the course of the semester, you must engage as a computer scientist in activities as shown below, in a way that you accumulate at least 2 points (towards your final grade). Possible activities (along with the number

of points each yields) include (but are not limited to – check with Schuyler if you'd like to do something that is not on the list):

- 0.5 points for each of the following:
 - Write a summary of a seminar you attended (proof of attendance needs to be provided as well);
 - Attend two review sessions provided by your undergraduate TAs or peer leaders before exams;
 - Participate in a Department's open house as a volunteer student;
- 1 point for each of the following:
 - Design a video about a specific career in Computer Science;
 - Write a summary of a book / chapter, agreed upon with Schuyler;
 - Write an essay about a specific research area in Computer Science;
 - Be an active participant in Google IgniteCS program (or equivalent);
 - Be an active undergraduate researcher in one of the Computer Science Research labs.

Resources

Special Accommodations

If you have a disability and need classroom accommodations, please contact the Center for Accommodations and Support Services (CASS) at 747-5148 or by email to cass@utep.edu, or visit their office located in UTEP Union East, Room 106. For additional information, please visit the CASS website at www.sa.utep.edu/cass. CASS' staff are the only individuals who can validate and if need be, authorize accommodations for students with disabilities.

Scholastic Dishonesty

Any student who commits an act of scholastic dishonesty is subject to discipline. Scholastic dishonesty includes, but not limited to cheating, plagiarism, collusion, and submission for credit of any work or materials that are attributable to another person.

Cheating is: Copying from the test paper of another student
Communicating with another student during a test to be taken individually
Giving or seeking aid from another student during a test to be taken individually
Possession and/or use of unauthorized materials during tests (i.e. crib notes, class notes, books, etc.)
Substituting for another person to take a test
Falsifying research data, reports, academic work offered for credit

Plagiarism is: Using someone's work in your assignments without the proper citations
Submitting the same paper or assignment from a different course, without direct permission of instructors

To avoid plagiarism, see: <http://sa.utep.edu/osccr/wp-content/uploads/sites/8/2012/09/Avoiding-Plagiarism.pdf>

Collusion is: Unauthorized collaboration with another person in preparing academic assignments

Important! When in doubt on any of the above, please contact your instructor to check if you are following authorized procedure. Also, please check the UTEP's Handbook of Operating Procedures at: <https://admin.utep.edu/Default.aspx?tabid=73922>

Detailed Learning Outcomes

Level 1: Knowledge and Comprehension

Level 1 outcomes are those in which the student has been exposed to the terms and concepts at a basic level and can supply basic definitions. On successful completion of this course, students will be able to describe, at a high level:

1. The history of computing
2. The relation between computing and society, including social, ethical, and legal issues
3. Computing as a profession, from required knowledge and skills to major career options
4. The relation between computing and society, including main social, ethical, and legal issues
5. Computer representation of simple data types and operations, including operations with binary numbers
6. Differences among programming languages
7. Pseudocode of the use of Multi-D arrays
8. Pseudocode of the use of Linked lists

Level 2: Application and Analysis

Level 2 outcomes are those in which the student can apply the material in familiar situations, e.g., can work a problem of familiar structure with minor changes in the details. Upon successful completion of this course, students will be able:

1. To analyze problems and express solution algorithms in pseudocode, including a correct use of:
 - a. Arithmetic and logical expressions
 - b. Simple I/O operations
 - c. User-defined subprograms, including recursive methods
 - d. User-defined types
2. To use testing and debugging strategies, including black-box and white-box testing, test drivers, stubs and test suites, to identify software faults
3. Use teamwork roles and methods in the classroom

Level 3 Outcomes: Synthesis and Evaluation

Level 3 outcomes are those in which the student can apply the material in new situations. This is the highest level of mastery. On successful completion of this course, students will be able to use the syntax and semantics of a higher-level language to express solutions to programming problems, including the pseudocode correct use of:

1. Basic variable types such as integer, real number, character, string, 1-D array
2. Assignment, arithmetic, and logical operations
3. Basic control structures: if-then, for-loop, while-loop
