EE 4371 Special Topics in Electrical Engineering: Real World Measurements (CRN: 22542)

Instructor: Scott Starks, Ph.D., P.E.
Office: Room E230B, CREATE Office (above the breezeway between the Engineering and Class Room Buildings)
Office Hours: 10:00 – 11:50 TR
Phone: 915-747-8856
E-Mail: sstarks@utep.edu
Course Location: Room 305, Class Room Building
Time: Tuesdays and Thursdays 12:00 – 1:30 PM
Textbooks: An Introduction to Electric Circuits by Scott Starks. This primer will be made available free of charge to the class through Black Board.

Course Description

Conducting experiments and making measurements is an essential aspect of all branches of science and engineering. Nearly all of our current quantitative understanding of the natural and engineered world has come from the interplay between theory and measurements. Models and simulations of systems require experimental validation and performance of engineered systems must not only be predicted, but also measured and tested. In this course we will learn the basic tools of making physical measurements and conducting experiments. We will collect data, analyze data, conduct basic error analysis, and design experimental systems. Using inexpensive modern sensors, we will build the necessary supporting electronics and learn to collect data with computer based data acquisition systems. The first part of the course will focus on individual work and students will conduct labs on basic electrical, mechanical, and environmental measurements. The later part of the course will involve a team project where measurements are made outside the controlled environment of the classroom.

Learning Objectives

At the end of the semester, students will:

1. Have the ability to analyze simple electronic circuits.
2. Design and build systems that are capable of sensing various physical phenomena.
3. Understand the theory of operation of real world sensing devices.
4. Be able to design a sensing platform that can be integrated into a real world application or environment.
Competencies

Qualitative analysis, quantitative analysis, teamwork, communication, understanding of context, design, diagnosis, electronic laboratory skills, breadboarding, measurement, sensing, and system integration.

Course Topics

I. Introduction to Electric Circuit Analysis
   a. Charge, Current and Voltage
   b. Ohm’s Law
   c. Kirchoff’s Voltage Law
   d. Kirchoff’s Current Law

II. Basic Laboratory Practices
    a. Powered Breadboard
    b. Supply Voltages and Ground
    c. Constructing Circuits
    d. Voltage Divider Principle

III. Digilent Analog Discovery
     a. Downloading “Waveforms” Software
     b. Simple Operations and Measurements Using the Analog Discovery

IV. Resistors and Potentiometers
    a. Resistor Color Codes
    b. Resistor Measurement
    c. Trim Potentiometers

V. Operational Amplifiers
    a. Circuit Configuration
    b. Measurement of Operational Amplifier Characteristics
    c. Closed-Loop Performance
    d. Negative Feedback
    e. Amplifier Design
    f. Practical Limitations

VI. Filters
    a. Passive Filters
    b. Active Filters
    c. Frequency Response (Amplitude and Phase)
    d. Bode Plots

VII. Projects
    Thermal
    EKG/ECG
    Strain Gauge
    Ultrasonic Range Finder
    Remote Data Logger
Grading Policy
Students will be graded on the basis of assigned projects (40%), capstone project (20%),
diagnostics/quizzes (10%), book report/discussion (10%), co-curricular project (10%), and
teamwork/leadership (10%).
Letter grades will be assigned according to the following scale:
90 – 100 % A
80 – 89 % B
70 – 79 % C
60 – 69 % D
59 or below F

Attendance Policy
Students are expected to attend all classes. Students who miss 3 or more classes may be
dropped from the class.

Assigned Projects
Students will be required to complete approximately 6 projects during the term. These projects
primarily deal with the design and construction of electric circuits that can be used for sensing
and measurement. Students will be grouped into pairs for each project. The pairs will be
changed each week to enable each student to work with most other students in the class. The
instructor will keep track of and assign the pairs for each project.

Capstone Project
The final two weeks of the course will be devoted to the completion of a Capstone Project.
Teams of 3-4 students will be formed to accomplish the Capstone Project. Students will be
given the opportunity to formulate the topic of their Capstone Project.

Diagnostics/Quizzes
Students will gain a foundation and an appreciation of the theory of electric and electronic
circuits in the class. From time to time, diagnostics/quizzes will be administered to gauge the
preparedness of students in the area of electric/electronic circuit theory.

Book Report/Discussion
In order to build one’s leadership abilities, it is essential to become aware of the contemporary
issues that confront leaders. The Engineering Leadership faculty have established a policy that
majors will read at least one book on the topic of leadership each semester. The book that will
be associated with this course is The Top Ten Mistakes Leaders Make. Students are expected to
read this book and to be prepared to discuss its merits during the class.

Co-Curricular Project
The Engineering Leadership faculty deems it important for students to participate in a co-
curricular project each semester. The Co-Curricular Project will be conducted in a team format
and all students are expected to contribute toward it.
Teamwork/Leadership
Because so much of this course will be conducted by teams of students, 10% of the grade will be based upon the teamwork and leadership that each student displays. Both peer- and instructor-based criteria will be utilized.

Cell Phone Policy
Cell phones are not permitted during the lecture. Students are required to turn off cell phones before entering the classroom. Cell phones should be placed out of sight (like in a purse or backpack). Students should NOT receive or make calls/text messages during class. Students using cell phones during class will be asked to leave.

Academic Dishonesty
“Any student who commits an act of scholastic dishonesty is subject to discipline. Scholastic dishonesty includes, but is not limited to, cheating, plagiarism, collusion, the submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts. Proven violations of the detailed regulations, as printed in the Handbook of Operating Procedures, and available in the Office of the Dean of Students and the homepage of the Dean of Students at www.utep.edu, may result in sanctions ranging from disciplinary probation, to a failing grade in the work in question, to a failing grade in the course, to suspension or dismissal, among others.” (Quote from the Undergraduate and Graduate Catalog)

Accommodation under the Americans with Disabilities Act
If you feel you may have a disability that requires accommodation, contact the Disabled Student Services Office at 747-5148, go to room 106E Union, or e-mail dss@utep.edu.
