Course Objectives (Learning Outcomes): This course is the second part of the calculus sequence. In Calculus I, you were introduced to the three fundamental notions upon which calculus is built: limits, derivatives, and integrals. Our main objectives of this course are

1. to deepen the comprehension of these notions through conceptual discussions and the investigation of many problems and applications.
2. to master more advanced methods and techniques, and apply them to the solution of a variety of problems.

Course Activities/Assignments: **Homework:** Homework problems will be given for each covered section and collected during the following class period. The homework will be graded based on completion.

**Quizzes:** There will be weekly quizzes except for the weeks of exams. The problems will be taken directly from the homework problems or at least very similar to them. No make-up quizzes will be allowed. However, the two lowest quiz scores will be dropped at the end of the semester.
