Course Objectives (Learning Outcomes):	<p>In this course, we study approximate solutions to mathematical problems that cannot be solved or are difficult to solve analytically. We will look at algorithms for solving basic problems and analyze the errors that are introduced. We will also look at the structure of computers and the implications of using them in numerical calculations.</p> <p>There are three main objectives of this course for students as outlined in the text.</p> <ol style="list-style-type: none">1. Students should obtain an intuitive and working understanding of some numerical methods for the basic problems of numerical analysis.2. Students should gain some appreciation of the concept of error and of the need to analyze and predict it.3. Students should develop some experience in the implementation of numerical methods by using a computer. This includes an appreciation of computer arithmetic and its effects.
Course Activities/Assignments:	<p>Homework: Homework will be collected approximately every other week. Assignment will be posted on the course website and announced in class. No late homework will be accepted. Computer programming must be done in MATLAB.</p>
