Course Description

This is the lab to an introductory course to earth science that is designed to promote an understanding and appreciation of the historical, oceanographic and astronomic world in which we live. The earth is fundamental to life as we know it today. The geologic history support our understand of the world in which we live. You will also be introduced to the aspects of astronomy, specifically related to our world.

Catalog Description: GEOL 1212/1112. Study of the earth as a planet. A survey of earth history as interpreted from and exhibited by plants, animals, rocks, and minerals; a study of the earth in space; a survey of the physical processes operating in the hydrosphere. Includes an introduction to historical geology, astronomy, physiography, and oceanography.
Course Objectives

- The student will identify the many ways in which earth science is interwoven into the fabric of modern civilization in general, and in their own surroundings specifically. Earth science is more than rocks and whether it's hot or cold and you'll learn how to recognize how much earth science is in your own lives. You will be collecting data from your own area via the lab activities.

- The student will properly apply the scientific method to research a problem and formulate conclusions. All sciences share a common methodology of attaining knowledge that sees to eliminate bias and prejudice in research. You will learn the difference between a hypothesis and a scientific theory.

- The student will synthesize information from external sources and personal observations and incorporate them into lesson and lab activities. Many people are surprised that earth scientists can look at rocks in a road cut and tell a complete story of how those rocks came about or view the sky and be able to predict the weather. You will learn the principles that earth scientists use.

- The student will use proper descriptive, relational, and inferential data and be able to analyze it. You live in a very diverse landscape, there are few places where you can start driving in a desert and drive for a few hours to reach the cool mountains. Almost every important geologic or atmospheric process has an example taking place in this region and you will understand how they work and why they exist.

- The student will identify, describe, and classify earth materials, formations, and structures and interpret them in the context of geologic processes. They will do this by completing lesson and lab activities which may include collecting visual data photographs.

- The student will identify, describe, and classify the atmosphere, clouds, and weather forecasts and interpret them in the context of atmospheric processes. They will do this by completing lesson and lab activities which may include collecting visual data photographs.

- The student will communicate and defend their methodology and results using writing, graphical, and electronic forms in both the lessons and labs.

- The student will demonstrate their ability to download and use electronic resources and digital software such as Google Earth, Excel, various browser plugins and animations to support learning.
Course Expectations

This course is a 100% on-line course. On-line learning may require a more intensive effort than traditional learning. On-line learning does give you the freedom to study when and where you are most comfortable. The principal means of accessing your class will be through Learning Modules and should be accessed via the Learning Modules page. This page includes not only links to each individual module and its introduction as well as additional instructions related to the module, but also a discussion board. Assignments are submitted via each Learning Module, not as email. You can read the posting and respond. If you initiate discussions if you have questions, you may edit and organize discussion postings as needed. If you have technical difficulties, use the Help button to get an answer: send the instructor a message; call the Help Desk if you need assistance. For those who need additional time to complete their labs, you will have until the night before the next due date to complete them. A penalty will be applied. The availability for each lab is posted and when they will become unavailable.

We will be taking advantage of internet download and install needed software and browser plugins. If you aren’t comfortable with your computer skills, please expect to spend extra time learning. Don’t hesitate to contact the Help Desk trained in answering those types of questions. The computer imaging processing program (such as Paint) is used, so be sure to have it installed on your computer.

Procedures

- Class work will be posted and should be accessed under the Learning Modules tab. Each Learning Module will include: an introduction to the topic and a lab. Due dates are given on the schedule. **DO NOT MISS DUE DATES** - late work will be penalized. **It is important to keep up.**
- You should access each Learning Module as soon as you can and note what needs to be done and plan your work accordingly. I recommend that you set up to receive notifications of any e-mail, messages, and discussion posting so you know what is happening in class. If you have any questions, please don’t hesitate to ask.
- Use the provided answer sheet. It helps me when grading to have the question/answer pair. It is also helpful if you post your responses in a **different text color** to help me see your complete answer.
- You may submit work at any time before the due date and the earlier the better. It is not wise to wait until the last minute because ‘technical difficulties' are not a valid excuse for missing a deadline.
- If your work is submitted before 5 pm of the due date, I will make every effort to review your work and let you know if you need to revise it before it is officially graded. I will post a comment as to what you are missing or have answered incorrectly. To help me see your revisions, please post in a **different color than your original answers.**
- I will typically visit the electronic classroom daily and will try to acknowledge all e-mails within 2-4 hours during the workweek until 5pm. Questions and messages posted after 5 pm or over the weekend may not be acknowledged until the following day.
- Extra credit, if/when offered, is offered to the entire class, not to individuals and only if turned in by the due date.
- For technical difficulties please contact either the Help Desk (see Policies section for more info) or Blackboard via the Help link.
- Do **NOT** submit work anywhere but the Lab dropbox. If the dropbox is not accepting your upload, email me and let me know to reset the folder.
- **NO** work will be accepted after the last day of class. The last day of class is the last day of instruction, not the last day of finals. **NO** work is accepted during finals.
- Extra credit, if/when offered, is offered to the entire class, not to individuals.
- I make every attempt to present this class free of errors, but they do happen. If you see an error (due date, quiz question, etc.) please email me and let me know so I can fix it ASAP.
- Remember, it is **YOUR** responsibility to get your work turned in on time and submitted correctly. I will have your work graded within a day or so of the due date, if you don’t have a grade by then, be sure to check that your work was actually submitted.

## Assessment and Grading Criteria
12 labs will be offered during the course of the term. Your letter grade for the course will be based on your aggregate score from your 12 labs (100%).

Grades will be based on the following criteria and will be assigned using the scale:

- A = 90-100%
- B = 80-89%
- C = 70-79%
- D = 60-69%
- F = < 60%

Each lab will have an accompanying activity. These activities are intended to provide examples of the concepts covered in the lecture and how scientists work.

- The labs will be linked to from within each Learning Module.
- The labs are to be submitted via the same link.
- You will be provided with an Answer Sheet. Download it to your computer, fill in the answers, do a "Save" and upload it for grading. I especially appreciate it if your answers are in a different color or set off from the text, it helps me when grading.
- The Labs are to be submitted via the Lab link for each Learning Module.
- A comment box is available in the Lab dropbox where you may post any comments you want me to read concerning your work. If you have questions about the lab, ask via the Bb email so I can read them before grading. I, too, will use the comment box to post any comments I may have on your work as I was grading it. Please return to read the comments, especially if you do not receive a grade for a lab within a few days of the due date.
- If you upload your work early (before 5 pm of the due date) I will try my best to look it over and notify you if you have any errors/mistakes. You will have until the due date/time to revise and resubmit your work for full credit. Please post your revisions in a different color than your original answers.
- I prefer your work to be answered using your own words, not copied verbatim from the text, the Internet, or a fellow student. Copying answers, especially if not referenced, is plagiarism. Shared, copied, or plagiarized work will be severely penalized.
- Labs will be graded on a 10 point scale. The grade will be based both on content and on completeness of the response.

| 9-10: | The assignment is complete and correct. It shows insight and careful reflection on the topic. It is well written with complete sentences that respond to the questions. |
| 8-9:  | The assignment is essentially complete. The learner shows understanding of the topic although there are minor errors they are not conceptual in nature. |
| 7-8:  | The assignment is missing one or two answers or there are complete or there are errors in the work that reflect a misconception or lack of understanding. |
| 6-7:  | The assignment is lacking more than one answer. Work is poorly done or displayed and does not demonstrate understanding of topics. |
| < 6:  | Does not effectively address the assignment, major portions are missing. |

- Labs are due at midnight (Mountain Time). Labs posted after the deadline will lose 1 point.
- Labs can be turned in late up until the availability, or cut off, date (midnight the night before the next lab is due).
UTEP Policies for Students

Informed Consent: Some individuals may choose to disclose personal information during class. Therefore, it is important that all classmates agree not to discuss or write about what others have discussed in class.

Disability Statement: Services for students with disabilities are provided through the Academic Support Center’s Disability Services Office. Some examples of the assistance provided are: audio materials for the blind or dyslexic, note takers, readers, campus guides, audio recorders, a quiet testing area, and undergraduate academic tutors. In order to qualify for these services, documentation must be provided by qualified professionals on an annual basis. Disability Services forms are available in the Academic Support Center.

Military Statement: If you are a military student with the potential of being called into military service and/or training during the course of the semester you are encouraged to contact the instructor regarding these matters.

Professionalism: Students are learning professional skills and are expected to engage in classroom discussions, complete reading assignments and turn in assignments in a timely fashion as befitting professional behavior.

Scholarly Writing: Use clear college level writing with correct spelling and grammar for all assignments. If you need help in writing, check with the WNMU Online Writing Center.

Integrated Use of Technology: Because this is an online course, I am making the assumption that you are comfortable utilizing a computer, and navigating various software programs like Microsoft Word, Powerpoint. If you have any questions about computer requirements see the Student Resources in Blackboard.

Need Help?

1. Post a question to the Discussion Board. There is no such thing as a dumb question.
2. Post a question as a Blackboard email to your instructor.
3. Click on the Help button in Blackboard.
4. If the Blackboard system goes down or you have other technical questions, contact the UTEP Help
Academic Integrity Policy and Procedures: Each student shall observe standards of honesty and integrity in academic work completed at UTEP. Students may be penalized for violations of the Academic Integrity policy. Please refer to the Academic Integrity section in the current UTEP Catalog.
(Clearly specify what you consider to be violations of academic honesty.)

Caveats: The schedule and procedures in this course are subject to change in the event of extenuating circumstances.

Code of Civility: In order to promote a positive, professional atmosphere among students, faculty and staff, the following Code of Civility has been developed:

- **Respect**: Treat all students, faculty, staff and property with respect and in a courteous and professional manner. This includes all communications, whether verbal or written. Let your actions reflect pride in yourself, your university, and your profession.
- **Kindness**: A kind word and gentle voice go a long way. Refrain from using profanity, insulting slang remarks, or making disparaging comments. Consider another person’s feelings. Be nice.
- **Truth**: Exhibit honesty and integrity in your dealings with fellow students, faculty and staff members. Don’t lie, don’t cheat, and don’t steal.
- **Responsibility**: Take responsibility for your actions. This includes gracefully accepting the consequences of your behavior.
- **Cooperation**: Exhibit a cooperative manner when dealing with students, faculty and staff so we may all work towards our common goals and mission.
- **Acceptance**: Accept differences in others, as they accept differences in you. This includes diversity in opinions, beliefs and ideas and everything else that makes us unique individuals.
- **Professionalism**: Always conduct yourself in a manner that will bring pride to your profession, to the University of Texas at El Paso, and, most importantly, to yourself.

2018 Vicki Harder
