ELED 4311: Teaching Science in Elementary Schools
CRN: 13592

Course Information
Location: Education Building Room 402
Time: Thursday 8:30 – 11:20 am

Contact Information
Instructor: William Medina-Jerez, PhD
Phone: 915-747-8608
Office: Education Building 604
E-mail: wjmedinajerez@utep.edu (Through Blackboard)
Office Hours: Wednesday (2:00 - 4:00 pm) and Thursday (12:00 – 2:00 pm)
If you would like to meet at a different time, please email me to set up an appointment.
I will try to answer Blackboard emails within the first day of receiving them (Monday-Friday). E-mails received after 5:00 PM Friday will be answered by Monday morning.

Purpose

The two major goals of this course are to assist preservice elementary teachers’ (PSETs—you) in examining their beliefs about science teaching and learning and to portray science education from a multicultural viewpoint. In this context, the teacher is an agent of social change, a practitioner who actively contributes toward establishing a pluralistic society by making the classroom one of the most important settings where gender, equity, anti-discriminatory principles and multicultural understanding are modeled and practiced (Rodriguez, 1998).

This course will also assist you in critically examining the theories, research, pedagogical approaches, and materials associated with effective learning and teaching in an elementary science/dual language classroom. This course will focus on the knowledge and skills you need to design and implement a science learning environment where every student is held to high expectations and encouraged to achieve maximum learning. You will learn to develop instructional strategies using the Texas Essential Knowledge and Skills (TEKS) for science, the Next Generation Science Standards (NGSS), STEM curricular materials, instructional models such as sheltered instruction and the 5E Instructional Model. During the Science Teaching event (See course calendar), you will use concepts from Standards I, III, VI, and V of the Pedagogy and Professional Responsibilities Standards (PPR) with particular emphasis on constructing and implementing instructional strategies, informal and formal assessment, and managing the learning environment. This course is also designed to address the following science standards from the K-4 Comprehensive Standards:

Standard I: The science teacher manages classroom field, and laboratory activities to ensure the safety of all students and the ethical care and treatment of organisms and specimens.

Standard III: The science teacher understands the process of scientific inquiry and its role in science instruction.

Standard IV: The science teacher has theoretical and practical knowledge about teaching science and about how students learn.

Standard V: The science teacher knows the varied and appropriate assessments and assessment practices to monitor science learning.
Guiding Principles for this Course

This course is organized around the community of practice and service learning principles and strands (Michaels, Shouse, & Schweingruber, 2008):

**Principle 1—Community of Practice**: is a concept that describes how people work together for their common interests and learn from each other's expertise to develop themselves personally and professionally. To form a community of practice in this course, the science lesson project is designed as a common goal that drives students to prepare themselves, help each other, and collaborate to achieve by the group. This collaboration entails peer-reviewing an Essay and the first draft of the 5E Lesson plan.

**Principle 2—Service Learning**: is an approach that aims to enrich learning experiences and strengthen communities through services. The Science Teaching event in this course is designed as an opportunity for PSETs to contribute what they learn in this course to elementary school students in the El Paso region.

**Principle 3—Reflecting on Scientific Knowledge** (Understanding how scientific knowledge is constructed). This strand will be addressed when reviewing the Nature of Science (NOS) topics. Proficient science learners understand that predictions and explanations can be revised on the basis of learning new facts, generating new evidence.

**Resources**

There is no book for this course. There will be numerous handouts, class notes on lectures, discussions and presentations. I will make articles and other materials available throughout the course as needed. There is also a Blackboard platform to which you will be automatically connected by being registered for this course. The Blackboard tool is intended to be a supplement to this course; there you will be able to access, quizzes, assigned readings and other important resources you may want to review on your own.

Other materials we will be using:

- English Language Proficiency Standards (ELPS)
  http://ritter.tea.state.tx.us/rules/tac/chapter074/ch074a.html#74.4
- Science Teachers Association of Texas (STAT)
  http://www.statweb.org/
- Texas Essential Knowledge and Skills (TEKS)
  http://www.tea.state.tx.us/index2.aspx?id=6148
- Texas Safety Standards
  http://www.utdanacenter.org/sciencetoolkit/safety/
- National Science Teachers Association (NSTA)
  http://www.nsta.org/default.aspx
- The New Generation Science Standards (NGSS)

The University of Texas at El Paso (UTEP) College of Education - Fall 2019
Technology Requirements

- Each participant must be able to use their UTEP Blackboard account. You MUST have both a UTEP email address and password to take this course.
- You must have access to UTEP email and Blackboard prior to the beginning of the second class meeting. If you do not have one yet, you may apply for your UTEP email account, login, and password from a form available online at: https://newaccount.utep.edu

Technical Assistance: The University of Texas at El Paso offers complete technical information and help desk support at: http://issweb.utep.edu/techsupport/.

Professional Expectations of Students

Part of your preparation as a teacher includes following a professional code of behavior and responsibility. Therefore, you are expected to treat all members of the class and your instructor with respect. Consider each class as a meeting with colleagues in your field and a great opportunity to exchange ideas. Attending class meetings on time and remaining for the entire scheduled period, being well prepared, and participating in classroom discussions are key parts of professional behavior. It is your responsibility to:

- Examine the Blackboard platform for this class, and inform your instructor by the second class meeting if you run into difficulties interacting in this environment.
- Read all the class materials thoroughly and continually consult the course schedule in order to keep up on all information associated with this course.
- Participate fully in all class activities and collaborate closely with your teammates.
- Be actively present in class; stay focused on the learning activities.
- Submit ALL your course assignments via Blackboard and in the prescribed format.
- Be courteous and honest in communicating with others that shows respect and sensitivity to cultural, religious, sexual, and other individual differences among all class members.
- Provide constructive feedback that helps your teammates, class members, and the instructor improve their performance, and appreciate it when they provide you with the same.
- Use the assignment templates in the preparation and submission of your assignments. If you do not follow the directions presented in the templates you will lose points.
- Set your cell phone into silent mode before starting the class meeting. As stated above, each class is a meeting with colleagues in your field. Professionals turn off/silence their phones in a meeting with other professionals. A ringing phone disrupts because the sound of a phone attracts attention. Disruptions of the learning process are annoying.
- iPads, tablets, or laptops in class: I do not mind you using your iPad, tablet, or laptop in class as a resource for the learning taking place in the class meeting. Using your device in class for a different purpose shows a lack of respect for your teammates and instructor and disinterest in the course that is unprofessional.
- Be persistent. If you run into difficulties, do not wait! Contact your instructor (see Contact Information above), or check with one of your classmates through Blackboard email. Most problems are easily solved but we have to hear from you before we can help.
- Inform the instructor if you are going to be absent so that you can get an update on what you missed (i.e., assignments). If you miss class consult the PowerPoint Presentation (PPT) in the Content area/Class Notes of Blackboard.
- Be aware of your absences. It is the student's responsibility to call attention to their presence in the class (and sign the attendance sheet) if they come in after the attendance is taken. Inform your instructor as soon as possible if you have problems submitting your assignments on Blackboard. If the Blackboard system does not allow you to turn in the assignment, you must send it via email to your instructor before the due date. Assignments submitted one week after the due date will not be graded for full credit—see Assignment submission policy on page 8.
Students Expectations of Instructor
You can expect me to be on time, prompt with assignments and feedback, knowledgeable in the topics being covered; create and provide opportunities for you to practice fundamental pedagogical content, and to bring in experts in the areas to augment my background either where needed or simply advantageous. To the best of my ability, I will treat all students equally, fairly, pleasantly, and be readily available for help outside class time.

Student Learning Outcomes
It is expected that by the end of the course, the successful student will be able to:

1. Identify the value of inquiry as an instructional strategy.
2. Develop the ability to assist elementary school students in designing investigations using scientific inquiry.
3. Outline strategies for modifying content area lessons to accommodate English Language Learners (ELLs) according to guiding principles like those in the NGSS, the pertinent TEKS, and the Socio-Transformative-Constructivist (sTc) learning theory.
4. Understand and address the role of underrepresented groups in the science curriculum.
5. Identify and integrate quality Science, Technology, Engineering and Mathematics (STEM) curriculum materials (e.g., Engineering is Elementary [EiE]) into instructional activities relevant to elementary education learning settings.
6. Demonstrate and understand the implementation of different instructional strategies and teaching materials consistent with the goals of the Next Generation Science Standards (NGSS), and the applicable Texas Essential Knowledge and Skills (TEKS).
7. Develop a well-thought-out philosophy of science teaching.
8. Demonstrate proficiency in the use of the 5E Instructional Model as a tool for lesson planning that supports the teaching and learning of basic and integrated inquiry process skills.
9. Collaborate with peers in a scientific investigation to show a willingness to engage in science as a learner.
10. Collaborate with peers in our course in the analysis of effective and teaching methods for teaching elementary science.

Assessment of Student Learning Outcomes

<table>
<thead>
<tr>
<th>Assignment</th>
<th>Assessment of Learning Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Quizzes</td>
<td>Learning outcomes: 1, 3, 6, and 8</td>

</tbody>
</table>

**Total Points** 315

*IA: Individual Assignment; GA: Group Assignment

**In the case of the 'in-class' activities, students must be present throughout the entire class meeting to earn the points.**

### Grades

Overall grading will be A-F, points weighted by percentages. All work is expected to be clearly written (and word-processed), reflect thoughtful response to the assignment guidelines, and be of high quality.

- A = 90-100%
- B = 80-89.9%
- C = 70-79.9%
- D = 60-69%
- E = Below 60%

### Description of Assignments:

Below you will find a description of each assignment for this course. Please do not hesitate to consult with me if you have any questions. Assignment instructions are also available in the Course Content section/Assignments folder of the course platform.

#### 1. Four Online Quizzes (IA):

All online quizzes cover the assigned readings to date, and are due by the posted time on the deadline date (See course calendar). The format of the quizzes may include multiple choice and/or short answer questions that you will need to answer completely with supporting evidence from the readings. Please, do the readings before completing the quizzes; I also encourage you to consult the Reading Strategies folder in the navigation menu. Quizzes are also timed (30 minutes) so you should be sure to set yourself up in a quiet place to take this in one attempt. Be sure to save your answers after each response and finally submit the quiz when you have it completed. There will be six (6) online quizzes. In case you complete more than four quizzes, the instructor will use your best four scores in the calculation of your grade for this assignment.

---

The University of Texas at El Paso (UTEP) College of Education - Fall 2019
If you run into technical difficulties while completing and/or submitting your online quiz, you will have the opportunity to complete a new quiz in the instructor's office, in a paper-and-pencil format, and for the time you had left in your first attempt.

2. Lesson Plan (GA): Two or three students work as a group to design a 5E lesson plan that addresses the applicable TEKS and the Engineering by Design Process (EDP). The components should be written clearly in the lesson plan: (a) title, grade, and source (b) learning objectives, (c) Links to TEKS, (d) the phases of the 5E Learning Cycle: Engage, Explore, Explain, Elaborate, and Evaluate, (e) references/bibliography, and (f) supportive documents (i.e., activity guide, hand-out). We will deliver this lesson plan to a group of elementary students during the Science Teaching Event (Nov. 16).

The 5E lesson plan (single-spaced, 2-3 pages long, not including supporting documents [i.e., activity guide]) will be submitted through the BLACKBOARD platform, and will be peer reviewed. Your instructor will assign each group another group's lesson for review. Each student will be expected to complete this review using the checklist and the assignment rubric provided in the Course Content area of the Blackboard platform (Rubric folder). Reviewers will submit their review through the Blackboard Assignments section and by the assigned due date.

3. Growth Essays (Impressionist tale, science teaching philosophy (first draft for peer review), and science teaching philosophy (final draft) (IA)

Growth Essay 1: Impressionist Tale
This is a 1-page long (double-spaced) essay that includes two paragraphs: a science learning episode and a reflection. Impressionist Tales (van Maanen, 1988; Bryan & Tippins, 2005) portray highly personal perspectives of a special moment in time. They are written with the intention of (a) drawing the reader into the image—to make the reader see, hear, smell, feel, and taste what the story teller describes; they also (b) use evocative language that reveals the writer's deepest feeling about the topic. Impressionist Tales are similar to impressionist paintings (e.g., Starry night) which are set out to capture a scene in a special instant or moment of time...what the painter sees is what the viewer sees. Impressionist painters (Monet, Van Gogh, and Renoir) attempted to evoke a participatory sense in the viewer by painting everyday, common, more familiar scenes.

- Think back of your elementary, high school, or college days and write one impressionist tale/paragraph on a science learning episode.
- The second paragraph will present your brief reflection on the emotions you experienced as a learner on that occasion. It is argued that learning science is an emotional practice. In this paragraph you answer the questions “What emotions (positive/negative) did you experience in the event described above, and how did (or are still) those emotions impact your engagement in science learning throughout your schooling career?”

The first goal is for you to take time and reflect on your science learning experiences using a significant learning episode from your elementary, secondary, or tertiary education in science. The second goal deals with the concept of Critical Emotional Pedagogy (CEP). As teachers, we need to become aware of and understand not only our students' (including ELLs) social and emotional experiences while engaged in science lessons, but also our own. CEP is defined as the implementation of "strategies for evoking and responding to the variety of emotions students may display as a result of critically engaging with specific subject matter topics” (Rodriguez, 2017, p. 265).

*Find samples of impressionist tales in Blackboard. The instructor will introduce this writing format in class.

Essays 2 & 3: Science Teaching Philosophy statements (first and final drafts) *
There are different reasons for having a "science teaching philosophy.” It gives you the chance to situate your science teaching and learning perspectives, revitalize your views and gain confidence to face your...
profession. It is also highly beneficial for you to have this statement to share with prospective employers as a competitive tool to set yourself above other candidates. You should begin your own philosophy of [science] teaching even before your placement in a field experience. Expect your thoughts about education to change as you learn and grow professionally. Allow this reflective exercise to show your growth within the profession across time and thus renew your dedication to the field of education. Research has shown that prospective teachers' personal histories with the learning of science (both positive and negative) have a great influence on how they teach science. Remember, this is a science teaching philosophy statement, not an education philosophy statement.

In this 1 ½ page (double spaced) statement, you are expected to convey your views about the teaching and learning of science in elementary school classrooms. Make sure to: a) address briefly your essay one—one or two sentences, b) incorporate ideas, concepts, and principles discussed and practiced in class and c) in the final draft, address the comments and questions provided by your peers and the instructor in the revision of the first draft. Statements are cumulative or emergent; they evolve by addressing comments and suggestions from the instructor and including new evidence and ideas from class topics, discussion, and activities.

Note that essay 2 will be submitted for a blind, peer review exercise—the instructor will give each student a philosophy statement to review. You will earn the points by submitting on time your essay (5 pts) and for reviewing the assigned essay (5 pts). Each student will receive feedback from the instructor and classmates on Essay 2. Essay 3 (final draft of your science teaching philosophy) will be reviewed and graded by the instructor.

Here are some ideas for your essay 2. Remember this essay may change by the final draft—be honest and humble if you are unsure at this point.

1. Your previous experiences as a science learner
2. Your goals, where you want to go professionally
3. Why you decided to enter the teaching profession
4. Your definition of teaching and learning in formal and informal settings
5. Your role in helping students achieve and develop
6. Your style and belief about effective teaching
7. Why you believe science teaching and learning is valuable
8. Your personal characteristics and strengths

*See Science Teaching Philosophy samples and rubric in the course platform (Blackboard).

4. Activities (IA & GA): These are both individual and group activities that will take place in class and outside the regular class time. In each class we will engage in activities that illustrate and document exemplary science learning/teaching strategies, and/or exemplify main ideas in the assigned readings. See activities highlighted in the course calendar (pages 11-13).

5. Discussion Facilitation (GA): Students will work in pairs in the preparation of the activities that will help them lead the class discussion on the reading/s assigned for each week. During this time slot (10-15 minutes) you and your teammate/s will play the role of teachers promoting engagement and dialogue around the topics addressed in the reading/s of the week. Your instructor will contact your group ahead of time with some ideas to get you started on the planning process. Your group will submit the instructional plan no later than Tuesday of the week you signed up for leading the class discussion. The instructor will model this assignment during week 2.
6. **Final Exam (IA):** This examination will cover readings, class notes, in-class activities, individual and group projects. Sample questions and format will be discussed in class and posted on the Blackboard prior the midterm evaluation. Like in the case of the online quizzes, you need to plan ahead so that you can complete this test in one attempt.

Find, in the **Reading Strategies** section of the navigation menu, the weekly reading resource (e.g., anticipation guide) that will help you interact with the assigned readings.

Also, in the navigation menu, you will find the **Course Modules.** Each module highlights the main concepts addressed in class. Modules consist of a discussion of ideas, principles, and teaching and learning methodologies. At the end of each module, you will find a set of questions intended to test your knowledge and understanding of the discussed concepts. I highly encourage you to interact with the course content by revising these modules. This is an optional activity.

---

**Academic Policies**

**Assignment Submission**

Your assignments are **expected to be submitted online (via Blackboard) using the assignment template on the scheduled day and time; submit them according to the prescribed format (e.g., written report). Late work will not be accepted for full credit unless you have evidence of extenuating circumstances.** Unfortunately, sometimes less than excusable circumstances arise even for professionals in the field and you made need an extension. However, I will only agree to grade late work for the first week following a due date, deducting 25% off the total grade. No assignments will be accepted past one week late. Plan carefully to ensure you meet the deadlines. If you wait until the last minute, things that can go wrong often do. Your computer will crash, the internet connection stops working, etc. Please ask if you have questions or concerns about how to do any assignment in this course. You need to check your Blackboard email regularly for communications from your instructor. Once you submit your assignment **make sure it is posted.**

Assignments will be submitted in the Assignments area of the navigation menu, and will need to be posted as Word files or as a PowerPoint (PPT) only **(no rft. or Prezi formats, please).** When submitting a group assignment, your group will designate a member to be responsible for the submission of the project—this is part of the goals your group will set up in class. Please, include in each submission the names of the students [and their responsibilities] that participated in and contributed to the preparation of the group project. Assignments that are labeled “missing” by the Blackboard system **will not** be accepted without the instructor’s prior written approval [email communication]. You will not be able to submit your assignments after the due date. It is your responsibility to inform your instructor ‘as soon as possible’ if you run into technical difficulties while submitting/posting your assignments on Blackboard. If this happens, you need to **send your assignment via email before the due date so that your assignment can be graded for full credit.**

**Attendance Policy:** Learning in this class is considered a communal endeavor as well as an individual undertaking. Class attendance is crucial for a full understanding of course material, because many of the topics and content will be taught and communicated through class demonstrations, activities, and discussions. If you are absent from a class, contact your instructor or another student to find out what occurred during the class you were absent from. Tardies result from anytime between 8:30 and 8:45 am. Three tardies (and/or leaving early [15 minutes]) will result in an unexcused absence.

- Your 1<sup>st</sup> absence is excused.
- Your 2<sup>nd</sup> absence will reduce your final grade 5 %.
- Every absence after your 2<sup>nd</sup> reduces your final grade 10 % per absence.
UTEP Teacher Education Department Policy on Course Absences
The UTEP Teacher Education Department considers missing two weeks of class excessive. The student may be dropped for lack of attendance. If you miss two weeks of class, contact your instructor immediately.

Communicating Effectively Online: When we talk face-to-face, we expect other people to observe certain rules of behavior. The same is true online. Here are a few pointers to help you communicate more effectively via e-mail and discussion boards:

- Clearly summarize the contents of your message in the subject line of your e-mail AND your discussion board postings.
- Avoid using all capital letters. USING ALL CAPS MAKES IT LOOK LIKE YOU'RE SHOUTING! IT'S ALSO MORE DIFFICULT TO READ.
- Avoid using sarcasm in your postings and e-mail messages. Sarcasm does not translate well in the online world. If you have a dry sense of humor, use smiles :) to defuse what could be constituted as an abrupt message (but don’t over use them! :)).
- More information on Netiquette can be found at: www.albion.com/netiquette

Academic Integrity
Students are expected to uphold the highest standards of academic integrity. Any form of scholastic dishonesty is an affront to the pursuit of knowledge and jeopardizes the quality of the degree awarded to all graduates of UTEP. Any student who commits an act of scholastic dishonesty is subject to discipline. Scholastic dishonesty includes, but is not limited to cheating, plagiarism, collusion, the submission for credit of any work or materials that are not attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts. Proven violations of the detailed regulations, as printed in the Handbook of Operating Procedures (HOOP) and available in the Office of the Dean of Students, may result in sanctions ranging from disciplinary probation, to failing grades on the work in question, to failing grades in the course, to suspension or dismissal among others.

Equal Educational Opportunity
In order to create equal educational opportunities in the class, all students are expected to demonstrate respect for the diverse voices and individual differences in the class. Particularly, no person shall be excluded from participation in, denied benefits of, or be subject to discrimination under any program or activity sponsored or conducted by the University of Texas at El Paso on the basis of race, color, national origin, religion, sex, age, veteran status, disability, or sexual orientation. Any member of the University community who engages in discrimination or other conduct in violation of University policy is subject to the full range of disciplinary action, up to and including separation from the University. Complaints regarding discrimination should be reported to the University's Equal Opportunity Office. Inquiries regarding applicable policies should be addressed to the University's Equal Opportunity Office, Kelly Hall, 3rd Floor, 915.747.5662 or eoaa@utep.edu.

Students with Disabilities Statement
If you have or believe you have a disability, you may wish to self-identify. You can do so by providing documentation to the Office of disabled Student Services located in Union E Room 203. Students who have been designated as disabled must reactivate their standing with the Office of Disabled Student Services on a yearly basis. Failure to report to this office will place a student on the inactive list and nullify benefits received. If you have a condition which may affect your ability to exit safely from the premises in an emergency or which may cause an emergency during class, you are encouraged to discuss this in confidence with the instructor and/or the director of Disabled Student Services. You may call 747-5148 for general information about the Americans with Disabilities Act (ADA).

The Disabled Student Services Office can also be reached in the following ways: Web: http://www.utep.edu/cass/
Inclusiveness and Equity
Learning happens only when we feel respected as a whole human being. My top priority in our course is to cultivate relationships of trust and respect and a sense that we see each other as whole, complex human beings. That you experience this in our class is important for the sake of your learning in our course and for the sake of your future students’ learning, so that you feel able to cultivate such relationships with them. To that end, I want you to know that all of you are welcome in our classroom environment—all the parts of you as a person are welcome in our discussions, our activities, our assignments, and in our assessments. We are all complex people with a variety of perspectives, experiences, challenges, assets, and resources—our gender identities, our sexual orientations, our religions, our races, our ethnicities, our economic statuses, our immigration statuses, our parenthood statuses, our veteran statuses, our ages, our languages, our abilities and disabilities. All the parts of you are welcome in our learning community to the extent that you feel comfortable bringing them in. I strive to show respect for the variety and wholeness in each of you, and I expect that each of you shows respect for each other as well. If you feel marginalized in our class, and you feel comfortable discussing it, I would like to know so that I can support you, protect you, and make changes that feel more inclusive and equitable. You can also talk with our Department Chair and/or you can report a complaint of discrimination to the University’s Equal Opportunity Office, Kelly Hall, Third Floor, 915-747-5662 or eoaa@utep.edu.

Course Schedule and/or Assignment Changes

The course instructor reserves the right to adjust the course syllabus or change assignments as needed. While every effort will be made to adhere to the calendar and the course outlines, there will undoubtedly be changes due to unexpected situations or pacing that may arise during the semester. Every attempt will be made for advance ‘warning.’ These modifications will be based on the specific needs of all the students in the course, but not to exceed difficulty or the due dates of the originally proposed assignment.

Assign Reading Material: Readings will be assigned and available via Blackboard in the Course Content Area/Course Readings. You will be responsible for reading these materials before class.

Plagiarism: Cheating is unethical and not acceptable. Plagiarism is using information or original wording in a paper without giving credit to the source of that information or wording: it is also not acceptable. Do not submit work under your name that you did not do yourself. You may not submit work for this class that you did for another class. If you are found to be cheating or plagiarizing, you will be subject to disciplinary action, per UTEP catalog policy. Refer to http://www.utep.edu/dos/acadintg.htm for further information.

Multiple Submissions: When turning in assignments, students may not resubmit work done for other courses. No credit will be given for a resubmission of a project or paper given in another class.

Incomplete Grades: An incomplete may be given if a student provides evidence of a documented illness or family crisis that precludes successful completion of the course.

Format and Submission: All written assignments should be double space (except lesson plans), font size 12 with 1 inch margins and submitted on Blackboard. Formal written projects are to follow the American Psychology Association (APA) format. Please ask if you have any questions about using the APA format, I will be happy to help!

Student Information Form

- Name: ___________________________ Preferred Name: _______________

- Major

- Hobbies and interests

- Science courses you have taken in college

- Your favorite subjects
  
  A. In elementary School
  B. In high school:
  C. In college:

- Please share your views on the following cases.

  Why did you choose to become a teacher?

  Please, describe briefly your experience/es with science and whether they were positive or negative.

  At this stage of your teacher preparation program, would you be able to deliver a [science] lesson? Yes/No? Why?

- Please, provide a definition of the following terms.

  A. Science
  B. Scientists

- Indicate on the scale below your knowledge of and previous experience with lesson planning:

### Assignment Rubrics

**Growth Essay 1: My Impressionist Tale**

<table>
<thead>
<tr>
<th>Component</th>
<th>10</th>
<th>5</th>
<th>1</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Length</strong></td>
<td>• The essay is 1-page (single-spaced) long.</td>
<td>• The essay is 1 – ½ pages (single-spaced) long.</td>
<td>• The essay is &gt;1 – ½ pages (single-spaced) long.</td>
</tr>
<tr>
<td><strong>One science learning episode</strong></td>
<td>• Addresses one meaningful science learning experience</td>
<td>• Addresses one science learning episode but fails to highlight its relevance</td>
<td>• Addresses more than one science learning episode</td>
</tr>
<tr>
<td>[Paragraph 1]</td>
<td>• Identifies time and location</td>
<td>• Identifies either time or space</td>
<td>• Missed to identify time and location</td>
</tr>
<tr>
<td></td>
<td>• Describes in detail the episode</td>
<td>• Partial description of the learning episode</td>
<td>• Vague description of the episode</td>
</tr>
<tr>
<td></td>
<td>• Identifies the participants of the episode</td>
<td>• Identifies the participants of the episode</td>
<td>• Identifies only the main protagonist of the episode</td>
</tr>
<tr>
<td></td>
<td>• Draws the reader into the episode being described and uses evocative language that reflects what the writer feels about the topic.</td>
<td>• Partially draws the reader into the episode being described; the use of evocative language does not fully reflect what the writer feels about the topic.</td>
<td>• Does not draw the reader into the episode; the use of evocative language is minimal.</td>
</tr>
<tr>
<td><strong>Critical Emotions</strong></td>
<td>• Identifies emotions and feelings (positive/negative) associated with the learning episode.</td>
<td>• Provides a list of emotions and feelings (positive/negative)</td>
<td>• Provides a list of emotions and feelings (positive/negative)</td>
</tr>
<tr>
<td>[Paragraph 2]</td>
<td>• Answers the 2-part question</td>
<td>• Answers the 2-part question in a general manner.</td>
<td>• Provides a general answer to the 2-part question; includes an incorrect/unrelated citation</td>
</tr>
<tr>
<td></td>
<td>• Cites correctly at least one publication dealing with the concept of emotions; the citation clearly supports a statement of claim</td>
<td>• Incorrect citation; unclear relationship between the citation and the point being made</td>
<td></td>
</tr>
<tr>
<td><strong>Mechanics of English and Format</strong></td>
<td>• Appropriate expression of concepts, accurate vocabulary, no errors occur with regard to grammar, conventions and spelling.</td>
<td>• Clear expression and vocabulary, some mechanical errors exist but do not get in the way of understanding.</td>
<td>• Unclear expression of concepts, mechanical errors exist. Many errors with regard to grammar, spelling and conventions.</td>
</tr>
<tr>
<td></td>
<td>• Document is consistent in format (font type and size).</td>
<td>• Document has some formatting problems.</td>
<td>• There is no formatting structure.</td>
</tr>
</tbody>
</table>
### Growth Essay 2: Science Teaching Philosophy Statement

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Feedback</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1. Philosophy of science teaching statement is 1 – 1 ½ pages and double-spaced; submission uses the assignment template.</strong></td>
<td>5 3 1</td>
</tr>
<tr>
<td><strong>2. Philosophy statement addresses:</strong></td>
<td>5 3 1</td>
</tr>
<tr>
<td>• Your beliefs about <strong>science education</strong></td>
<td></td>
</tr>
<tr>
<td>• Addresses essay one (prior learning experiences in science and L2).</td>
<td></td>
</tr>
<tr>
<td><strong>3. The tone in your philosophy statement:</strong></td>
<td>5 3 1</td>
</tr>
<tr>
<td>• <strong>Incorporates science education terminology</strong></td>
<td></td>
</tr>
<tr>
<td>(e.g., inquiry learning, hypothesis, misconceptions)</td>
<td></td>
</tr>
<tr>
<td>• <strong>Personal</strong> (in your writing you use the 'I' instead of the third person)**</td>
<td></td>
</tr>
<tr>
<td><strong>4. Mechanics of Standard English</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Appropriate expression of concepts, varied and accurate vocabulary, no mechanical errors. Make sure to do a spell check before submitting/posting your assignment.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>5. Revision of the concept map from Activity 1.</strong></td>
<td></td>
</tr>
<tr>
<td>Answer these questions as a separate note at the end of the essay:</td>
<td></td>
</tr>
<tr>
<td>• Do you have new ideas now that you want to add to your science education map?</td>
<td></td>
</tr>
<tr>
<td>• What changes/additions would you make?</td>
<td></td>
</tr>
<tr>
<td>(This concept map is not part of the 1 ½ page philosophy statement). Add a revised copy to your submission.</td>
<td></td>
</tr>
</tbody>
</table>
### Growth essay 3: Science Teaching Philosophy Rubric (Final Draft)

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Feedback</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Philosophy of science teaching statement is 1 – 1 ½ pages and double-spaced; submission uses the assignment template.</td>
<td><strong>Excellent</strong> 5</td>
</tr>
<tr>
<td>2. Philosophy statement:</td>
<td></td>
</tr>
<tr>
<td>- Is <strong>fully focused</strong> on science teaching and learning in elementary/middle school classrooms.</td>
<td></td>
</tr>
<tr>
<td>- Briefly addresses the <strong>autobiography</strong> (essay 1) as a science learner.</td>
<td></td>
</tr>
<tr>
<td>- Clearly <strong>addresses reviewers’ comments</strong> on Essay 2. Use bullets or numbers at the end to explain how each comment and suggestion was addressed.*</td>
<td></td>
</tr>
<tr>
<td>- <strong>Incorporates science education terminology</strong> (e.g., misconceptions, inquiry investigations)</td>
<td></td>
</tr>
<tr>
<td>- On a separate page (#3).</td>
<td></td>
</tr>
<tr>
<td>A. Provide a revision of the concept map constructed on the first class meeting.</td>
<td></td>
</tr>
<tr>
<td>- Insert an updated version of your concept map.</td>
<td></td>
</tr>
<tr>
<td>- What concepts/ideas have become relevant in your concept map? Why?</td>
<td></td>
</tr>
<tr>
<td>B. In the drawing/painting done in class(activity 3) you conveyed your views about how to teach and learn science in elementary school classrooms. If today you were to produce a second drawing, would your depiction look different? How?</td>
<td></td>
</tr>
<tr>
<td>C. Mechanics of English</td>
<td></td>
</tr>
<tr>
<td>- Varied and accurate vocabulary, no mechanical errors. Do a spell-check before submitting/posting your assignment.</td>
<td></td>
</tr>
</tbody>
</table>

*For example:*

*Reviewer’s comment 1: The statement goes beyond the space limit. I reorganized my statement and was able to put my ideas into a 1 ½ page-document.*
### 5E Lesson Plan

<table>
<thead>
<tr>
<th>Lesson source, title &amp; Connection with Food Pedagogy</th>
<th>10-7 pts</th>
<th>6-4 pts</th>
<th>3-1 pt.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- The lesson indicates whether the content is adapted from an existing curriculum, from a classroom teacher, or information source. Credit should be given to the original author/s (Cite)</td>
<td>- The lesson shows some adaptations and identifies the source but fails to cite the author/s.</td>
<td>- The title is intriguing and represents the lesson plan</td>
<td>- The lesson does not identify the source; the lesson does not cite the author/s [if used from an existing source]. The title is intriguing but does not represent the lesson plan</td>
</tr>
<tr>
<td>- The title is intriguing, succinct and represents the lesson plan</td>
<td>- The title is intriguing and represents the lesson plan</td>
<td>- The title is not clearly focused on the scientific topic</td>
<td>- The title is intriguing but does not represent the lesson plan</td>
</tr>
<tr>
<td>- The lesson clearly builds on a food-related topic that allows the students to contribute to their own learning.</td>
<td>- The lesson partially addresses a food-related topic; the connection with students' experiences with the food item/recipe is unclear; it does not build on food as part of the Funds of Knowledge students possess.</td>
<td>- The lesson fails to build on a food-related topic</td>
<td>- The lesson does not address a food-related topic</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Learning objectives</th>
<th>10-7 pts</th>
<th>6-4 pts</th>
<th>3-1 pts</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Concise description of what learners are expected and able to do by the end of the lesson</td>
<td>- Descriptions of what learners are expected to learn are general.</td>
<td>- The description of the learning objectives is vague.</td>
<td></td>
</tr>
<tr>
<td>- Objective statements include a variety of actions verbs (lower and higher order) that address different cognitive levels.</td>
<td>- Most action verbs in the objective statements are from either lower or higher order thinking levels that do not address different cognitive levels.</td>
<td>- Action verbs in the objective statements do not support meaningful learning.</td>
<td></td>
</tr>
<tr>
<td>- There is evidence in the evaluation section that students' learning is linked to the concepts and skills addressed in the learning objectives.</td>
<td>- Fail to show connections with the evaluation section.</td>
<td>- The lesson needs a great deal of improvement; a substitute teacher will have difficulties delivering this lesson.</td>
<td></td>
</tr>
<tr>
<td>- Objective statements are clear enough that a substitute teacher would not have difficulties delivering the lesson.</td>
<td>- Some clarifications are needed; a substitute teacher may have difficulties delivering this lesson.</td>
<td>- Includes learning objectives that do not provide students with opportunities to demonstrate how much and how well they mastered the main concepts of the lesson.</td>
<td></td>
</tr>
<tr>
<td>- Includes at least two objectives from each category (content and language).</td>
<td>- Includes learning objectives but they are not identified; the action verbs are vague (e.g., to study)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>TEKS alignment</th>
<th>10-7 pts</th>
<th>6-4 pts</th>
<th>3-1 pt.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Lists pertinent standards for the target grade level.</td>
<td>- Listed standards do not fully relate to the lesson.</td>
<td>- Lesson is loosely connected to the standards.</td>
<td></td>
</tr>
<tr>
<td>- There is evidence (i.e., in the evaluation section) that student's learning is linked to the listed standards.</td>
<td>- Partial evidence (i.e., in the evaluation section) that student's learning is linked to the listed standards.</td>
<td>- The lesson does not address the four elements of the Socio Transformative Constructivist learning theory.</td>
<td></td>
</tr>
<tr>
<td>The lesson clearly addresses the principles of the Socio Transformative Constructivist learning theory.</td>
<td>- The lesson partially addresses the four elements of the Socio Transformative Constructivist learning theory; the elements are not identified.</td>
<td>- The lesson does not address the four elements of the Socio Transformative Constructivist learning theory.</td>
<td></td>

<td></td>
</tr>
</tbody>
</table>

- **Lesson Body**
  - Lesson clearly describes what the teacher and the student will do in each stage of the 5E cycle.
  - **Engagement** (hook/attention grabber): describes one task that creates interest and leads students into exploration.
  - **Exploration**: describes a STEM-based activity/strategy that encourages students to work together in the solution to the posed problem or challenge; students imagine, plan, test, and improve their designs; students formulate predictions and record observations and most importantly use the Engineering by Design process (EbD).
  - **Explanation**: includes at least 4 questions the teacher would use to lead a whole class discussion; teacher introduces new terms; [formally] provides definitions; uses students’ experiences as basis for explanations; [teacher] asks students for evidence/justification.
  - **Elaboration**: describes an extension [new] activity that is hands-on/minds-on; there is evidence that students use this activity to apply concepts and skills.
  - **Evaluation**: includes both formative and summative assessment formats; assessments address the concept and skills stated in the learning objectives.

- **References and Supporting Documents**
  - Includes text books and websites references used in the lesson.
  - Supporting documents are included at the end of the lesson as appendixes.

</thead>
<tbody>
<tr>
<td>- The presenters led the discussion for about 20 minutes</td>
<td>- The presenters could have used the allotted time — presentation last about 15/25 minutes</td>
<td>- The duration of the presentation was too short or too long (10/30 minutes)</td>
<td>- Presenters introduced information that did not really set the tone for the discussion of key points; presenters did not engaged in a conversation/discussion with the audience</td>
</tr>
<tr>
<td>- Presenters engaged [walked around the room] in a dialogue/conversation with the audience; they intervened by asking probing questions, encouraging responses, and by including participants from each group.</td>
<td>- Presenters introduced key information; intervened by providing answers to questions from the audience; the audience was not fully encouraged to discuss the concepts and activities in the presentation; most of the presentation was conducted by one team member</td>
<td>- Presenters introduced information that did not really set the tone for the discussion of key points; presenters did not engaged in a conversation/discussion with the audience</td>
<td>- Presenters introduced information that did not really set the tone for the discussion of key points; presenters did not engaged in a conversation/discussion with the audience</td>
</tr>
</tbody>
</table>

*I highly encourage you to read the instructor's comments on your initial plan. I will be happy to work with your team by clarifying some ideas in the reading or by suggesting the number and kind of activities to be used in the presentation.*
## Link to TExES Competencies (Science domain)

The content of this course addresses the following Texas Examinations of Educator Standards (TExES) competencies in the domain for the Generalist EC-6 and Bilingual Generalist EC-6 programs.

<table>
<thead>
<tr>
<th>Competency: Safe and proper laboratory processes.</th>
<th>These standards will be addressed and/or assessed with the following course activities and assignments</th>
</tr>
</thead>
<tbody>
<tr>
<td>The beginning teacher:</td>
<td>• 5E Lesson plan</td>
</tr>
<tr>
<td>D. Selects and safely uses appropriate tools, technologies, materials for instructional activities.......</td>
<td>• Inquiry investigation (Parts II, and III)</td>
</tr>
<tr>
<td>E. Understands concepts of precision, accuracy and error with regard to reading and recording numerical data from a scientific instrument ........................................</td>
<td>• Bird survey on campus</td>
</tr>
<tr>
<td>F. Understands how to gather, organize, display and communicate data in a variety of ways (e.g., charts, tables, graphs, diagrams, written reports, oral presentations)</td>
<td>• Popcorn activity</td>
</tr>
<tr>
<td>G. Understands the international system of measurement (i.e., metric system) ..............................</td>
<td>• Inquiry activities</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Competency: Scientific inquiry</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>The beginning teacher:</td>
<td>• 5E STEM lesson plan, final test, essays 2 and 3, and readings from week 2.</td>
</tr>
<tr>
<td>A. Understands plans and implements instruction that provides opportunities for all students to engage in non-experimental- and experimental-inquiry investigations .......................................</td>
<td>• Inquiry investigation (Part I), online quizzes</td>
</tr>
<tr>
<td>B. Focusses inquiry-based instruction on questions and issues relevant to students and uses strategies to assist students with generating, refining and focusing scientific questions and hypotheses ........................................................................</td>
<td>• Science Teaching Event</td>
</tr>
<tr>
<td>D. Knows how to guide students in making systematic observations and measurements .......................</td>
<td>• 5E Lesson and Science Teaching Event</td>
</tr>
<tr>
<td>E. Knows how to promote the use of critical-thinking skills, logical reasoning and scientific problem solving to reach conclusions based on evidence ..................................................................................</td>
<td>• Inquiry investigation (II &amp; III) and 5E Lesson</td>
</tr>
<tr>
<td>F. Knows how to teach students to develop, analyze and evaluate different explanations for a given scientific result ...................................................................................................................</td>
<td>• Popcorn activity, inquiry activities, bird survey, activities 3, 6 and 9.</td>
</tr>
<tr>
<td>G. Knows how to teach students to demonstrate an understanding of potential sources of error in inquiry-based investigation ........................................................................................................</td>
<td>• Inquiry investigation (I. II, &amp; III)</td>
</tr>
<tr>
<td>H. Knows how to teach students to demonstrate an understanding of how to communicate and defend the results of an inquiry-based investigation ........................................................................</td>
<td>• Online quizzes, and reading from</td>
</tr>
<tr>
<td>J. Understands the roles that logical reasoning, verifiable evidence, prediction and peer review play in the process of generating and evaluating scientific knowledge ..................................................................................................................</td>
<td></td>
</tr>
<tr>
<td>K. Understands the historical development of science and the contributions that diverse cultures and individuals of both genders have made to scientific knowledge ........................................................................................................................................</td>
<td></td>
</tr>
<tr>
<td>Competency: Impact on daily life/environment</td>
<td>week 4</td>

| The beginning teacher:                      |       |
| A. Understands how a unifying, explanatory  |       |
| framework across the science disciplines is |       |
| provided by the concepts and processes of  |       |
| systems, order and organization; evidence,  |       |
| models and explanation; change, constancy  |       |
| and measurements; and form and function.    |       |
| B. Demonstrates an understanding of how     |       |
| patterns in observations and data can be    |       |
| used to make explanations and predictions.  |       |
| F. Understands how change and constancy     |       |
| occur in systems.                          |       |
| G. Understands the complementary nature of  |       |
| form and function in a given system.       |       |
| • Inquiry investigation (Parts II and III)  |       |
| • In-class inquiry activities, readings     |       |
| from week 2                                |       |
| • Inquiry investigation                    |       |
| • Inquiry investigation                    |       |

| Competency: Theory and practice of science |       |
| teaching                                    |       |
| The beginning teacher:                      |       |
| A. Understands how developmental           |       |
| characteristics, prior knowledge and       |       |
| experience and students’ attitudes         |       |
| influence science learning.                |       |
| B. Selects and adapts science curricula,   |       |
| content, instructional materials and       |       |
| activities to meet the levels of interest, |       |
| knowledge and understanding as well as     |       |
| the abilities, experiences and needs of    |       |
| all students, including English-language   |       |
| learners.                                 |       |
| C. Understands how to use situations from  |       |
| students’ daily lives to develop           |       |
| instructional materials that investigate    |       |
| how science can be used to make informed   |       |
| decisions.                                |       |
| D. Understands common misconceptions in    |       |
| science and has effective ways to address  |       |
| those misconceptions.                     |       |
| E. Understands developmentally appropriate |       |
| design and implementation of hands-on      |       |
| learning experiences in science and selects |       |
| effective, appropriate instructional       |       |
| practices, activities, technologies and    |       |
| materials to promote students’ scientific |       |
| knowledge, skills and inquiry processes.   |       |
| • 5E STEM lesson (peer review, final draft, |       |
| and delivery), online test, online quizzes,|       |
| discussion facilitation, course activities,|       |
| and reflection.                         |       |
### Competency: Assessment in science learning

The beginning teacher:

**B.** Understands the importance of monitoring and assessing students’ understanding of science concepts and skills on an ongoing basis, including how to use formal and informal assessments of student performance and how to use products (e.g., projects, lab journals, rubrics, portfolios, student profiles, checklists) to evaluate students’ understanding of and participation in the inquiry process.

**C.** Selects — or designs — and administers a variety of appropriate assessment methods (e.g., performance assessment, self-assessment, formal/informal assessment, formative/summative assessment) to monitor students’ understanding and progress and to plan for instruction.

- Readings from weeks 6 and 8, 5E STEM lesson plan (design, review, and delivery), and final test.

### Competency: Life science

The beginning teacher:

**A.** Understands that living systems have different structures that perform different functions.

**B.** Understands and describes stages in the life cycles of common plants and animals.

**C.** Understands that organisms have basic needs.

- Inquiry investigation (I, II, and III)
