

CE 5345 – Advanced Physical-Chemical Water Treatment Processes

The University of Texas at El Paso
Department of Civil Engineering
Class: Tues/Thur 4:30-5:50pm, CRBL 304
CRN: 28040

Instructor: W. Shane Walker, Ph.D., P.E.
Email: wswalker2@utep.edu
Office: Engineering A-215
Phone: (915) 747-8729
Office hours: Tues/Thurs, 1:30-2:30pm

Philosophy

I believe that *teaching* and *learning* are interdependent; you cannot have one without the other. You and I are partners and colleagues, working together to help you become a knowledgeable, curious, intrinsically motivated, and confident engineer. I want to help you become a critical thinker with sharpened skills of analysis, evaluation, and synthesis. I incorporate team-based, hands-on projects in all of my courses to help prepare you for professional practice and to help you develop as a more robust and intrinsically-motivated engineer. I have also realized that it is important to provide weekly homework assignments and quizzes, which help students keep up with understanding and applying concepts. Thus, I have implemented a combination of homework assignments, quizzes, exams, and team projects in all of my courses, with strategic emphasis for the particular course.

Required Text:

MWH (2012) Water Treatment: Principles and Design, 3rd Ed., Wiley;

Supplemental Texts:

- Benjamin and Lawler (2013) Water Quality Engineering: Physical & Chemical Treat. Proc., Wiley;
- AWWA (2011) Water Quality & Treatment, 6th Ed., Edzwald (ed), McGraw Hill, <https://accessengineeringlibrary.com/browse/water-quality-and-treatment-a-handbook-on-drinking-water-sixth-edition>;
- Green and Perry (2008) Perry's Chemical Engineers' Handbook, 8th Ed., <https://accessengineeringlibrary.com/browse/perrys-chemical-engineers-handbook-eighth-edition>
- Davis (2010) Water and Wastewater Engineering, McGraw Hill;
- Viessman et al (2009) Water Supply & Pollution Control, 8th Ed., Pearson Prentice Hall.
- Droste (1997) Theory and Practice of Water and Wastewater Treatment, Wiley

Description and Objectives

This course involves an advanced study of theory and design of physical-chemical water treatment processes, in greater detail than the introduction provided in CE 4342 (Water & Wastewater Engineering), and complementary with CE 5409 (Environmental Engineering Chemistry), CE 5349 (Membrane Filtration and Desalination), and CE 5344 (Biological Unit Operations). Topics include mass-flow balances, reactor models, coagulation/flocculation, settling, adsorption, disinfection, and AOPs.

Expectations

Participation: More than simply attending class, you are invited to *think*, and *participate* in the lectures and discussions. I encourage you to be curious and inquisitive during lectures and discussions.

Preparedness: I recommend that you bring the textbook, a personal course notebook, a pen or pencil, a calculator, completed homework assignments, and questions from the homework and assigned reading.

Punctuality: You are expected to be on time to class, laboratory exercises, and plant tours. Assignments submitted late will receive half credit.

Ethics: In engineering, personal integrity is of utmost importance, especially in the assessment and reporting of environmental conditions. Also, in most cases, it is necessary to work in teams to develop and design optimal solutions to problems and challenges, and it is essential that each team member contribute to the

productivity of the team. In this course, I strongly recommend that you complete homework assignments in teams; in many cases, you will help each other through the solution of difficult problems. My goal for the homework is for you to develop proficiency in the basic application and calculations in design. Thus, every student is accountable for *understanding* the concepts, analysis, and solution. My goal for the projects is for you to have opportunity to apply this theory in a deeper and more meaningful way than homework. Each student is accountable for understanding and *contributing* (equitably) to the team projects. Any student committing plagiarism (*e.g.*, copying another’s work without understanding) or any other form of academic dishonesty will be reported to the Dean of Students for disciplinary action (which may include expulsion from the University). For a concise summary of engineering ethics, I have provided here the Fundamental Canons within the [Code of Ethics](#) of the American Society of Civil Engineers (ASCE):

1. *Engineers shall hold paramount the safety, health and welfare of the public and shall strive to comply with the principles of sustainable development³ in the performance of their professional duties.*
2. *Engineers shall perform services only in areas of their competence.*
3. *Engineers shall issue public statements only in an objective and truthful manner.*
4. *Engineers shall act in professional matters for each employer or client as faithful agents or trustees, and shall avoid conflicts of interest.*
5. *Engineers shall build their professional reputation on the merit of their services and shall not compete unfairly with others.*
6. *Engineers shall act in such a manner as to uphold and enhance the honor, integrity, and dignity of the engineering profession and shall act with zero-tolerance for bribery, fraud, and corruption.*
7. *Engineers shall continue their professional development throughout their careers, and shall provide opportunities for the professional development of those engineers under their supervision.*

Homework

Some of the homework assignments will be completed through the UTEP Blackboard website (available through <https://my.utep.edu/>), and some homework assignments will be completed through Quest Learning and Assessment (<https://quest.cns.utexas.edu>), a web-based content and homework delivery system maintained by The University of Texas at Austin. Please go to <https://wikis.utexas.edu/display/questla/Obtaining+a+University+of+Texas+EID> for instructions on how to sign up for the Quest system for this class. During the beginning of this course, when you log into Quest, you will be asked to pay \$30 via credit card on a secure payment site (<https://getquest.cns.utexas.edu/students/collegiate-subscriptions>), which goes toward the maintenance and operation of the resource. Billing for non-UT students begins on Friday, January 26 and closes Monday, February 12.

Peer Evaluation

Peer evaluations of team members will be based on five dimensions of team-member contributions (Contributing to Work; Interacting with Teammates; Keeping Team on Track; Expecting Quality; and Having Knowledge/Skills).

Evaluation

Assessment of your performance in this course will be determined by class attendance and participation, homework, quizzes, and exams. (No makeup exams will be offered.) Your total course average will be computed by the following:

Evaluation	Contribution (%)
Homeworks (7)	35
Quizzes	5
Team Project	10
Midterm Exams	30
Final Exam	20
<i>Total</i>	<i>100</i>

Furthermore, your final course grade will be determined according to the following:

Average (%)	Grade
≥ 90	A
80-89	B
70-79	C
60-69	D
< 60	F

I reserve the right to modify or augment this grading scheme for the sake of improving the educational effectiveness of this course.

Special Accommodations

The University of Texas at El Paso provides, upon request, appropriate academic accommodation for students with disabilities. For more information, contact the Center for Accommodations and Support Services (<https://www.utep.edu/student-affairs/cass/>).

Tentative Course Schedule

Class	Day	Date	Topics	Reading
1	T	JAN	16 Fluid mechanics, turbulence, mixing	-
2	R		18 Mass balance and ideal reactors: PFR, CMR	6.1-3
3	T		23 CMRs in series	6.3b
4	R		25 Chemical equilibrium and kinetics	5.1-5, 6.4
5	T		30 Ideal reactors with reactions	6.5
6	R	FEB	1 Tracer tests to exit age distribution	6.6
7	T		6 Modeling non-ideal reactors: DFM/TIS	6.7
8	R		8 Non-ideal reactors with reactions	6.8
9	T		13 PFRs in parallel, Segregated-Flow Model	6.9
10	R		15 Mixing, blending	6.10
11	T		20 Flocculation	9.6-7
12	R		22 <i>Drinking Water Treatment Plant Tour</i>	<i>Upper Valley WTP</i>
13	T		27 Exam review	-
14	R	MAR	1 EXAM 1	Ch. 5-6
-	T		6 Coagulation	9.1-5
-	R		8 Settling	10.1-9
15	T		13 <i>Spring Break</i>	-
16	R		15 <i>Spring Break</i>	-
17	T		20 Mass transfer: diffusion	7.1-3
18	R		22 Interfacial transfer	7.4-6
19	T		27 Operation and enhance. of mass-transfer	7.7-9
20	R		29 Gas-liquid interfacial theory	14.1-4
21	T	APR	3 Air stripping design	14.5-8
22	R		5 Adsorption	15.1-6
23	T		10 <i>Wastewater Treatment Plant Tour</i>	<i>Haskell Street WWTP</i>
24	R		12 EXAM 2	Ch. 9-10, 7, 14
25	T		17 Disinfection kinetics and design	13.1-8
26	R		19 Documentary: "How we got to now: clean"	-
27	T		24 AOPs with O ₃ , H ₂ O ₂ , and UV	18.1-3
28	R		26 <i>Wastewater Reuse Treatment Plant Tour</i>	<i>Fred Hervey Reuse Plant</i>
29	T	MAY	1 EXAM 3	Ch. 15, 13, 18
30	R		3 Team Project Presentations	-
31		TBD	FINAL EXAM, 4:00pm-6:45pm	(comprehensive)
